

Waterproofing Coatings

ENOXACOAT

Waterproof Coatings for all substrates such as concrete, membranes, flashing tapes, etc. formulated as Waterbased, Rubberized and Solvent Based with available various Solids content.

ENOXACRYL

Superior grade single component Acrylic based flexible elastomeric waterproof and protective coating for concrete & masonry surfaces. the coating is durable, flexible and has a high resistance to UV. The coating is suitable for both interior and exterior application.

ENOXALAN DP

Two component, tough elastomeric waterproof UV resistant coating. Forms a waterproof film with excellent adhesion, penetrates and covers minor cracks. Blocks water ingress to the substrate thus making it completely damp-proof

ENOXARUSH

Specially designed ready mixed mortar and mineral bonding agent, used as a mechanical key coat on substrates before rendering. It improves adhesion of plaster / cement render, applied on masonry block and concrete. Also used on aerated and light weight block work imparting high degree of bonding & hydrophobicity

ENOXASHIELD

Single and Two component acrylic co-polymer modified flexible cementitious waterproof coating. Forms excellent elastomeric, waterproof & protective layer over the substrate.

ENOXATHANE

Wide Range of Polyurethane Waterproofing and Floor Coatings, both single and two component systems. Used for Parking decks Bridge decks, Industrial floors, Food industry, Warehouses, Service stations, Chemical Plants, Metal treatment plants, Machinery service areas.
