# Mobile alarm- and emergency management system

## WHAT'S EVALARM?

EVALARM is a digital alerting and communication platform for emergency situations and technical alarms. Many modules such as mobile evacuation or watchdog-functionality are creating an additional added value.

## WHAT REALLY MATTERS !

In an emergency every second does matter! Forwarding the right information as quickly as possible to the right person, at the right place and time ensures the action ability of saving lives.

**EVALARM uses state-of-the-art technologies, providing outstanding new opportunities and benefits for optimizing your processes.**

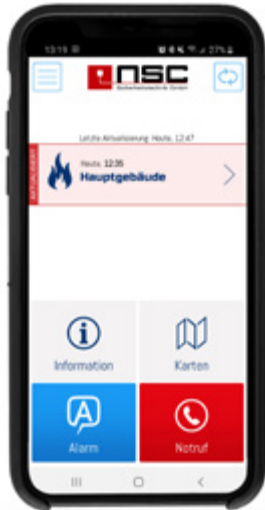

## ALARM TYPES

With EVALARM you can map any of your alarm and emergency situations. Furthermore you can define the required alarm types (e.g. fire alarm, extortion, amok and many more) yourself and deposit a suitable pictogram.

You can individually specify which persons and user groups can trigger and receive corresponding alarms. In addition, you can individually add additional information or questions to each type of alarm. In the event of an alarm targeted alarm-related information can thus be transmitted.

## EVALARM - Digital alerting and emergency communication

## Technical Support

---

**In order to make your phone call to our hotline as efficient as possible, it is necessary to provide some information about the project in which the problem occurs:**

Please keep your customer ID ready upon request.

We please you to have understanding that we can only provide our free technical service to our trained customers. The technical hotline is also not to be meant to receive orders.

- The calling technician should be on the spot to execute various tests which helps while fault diagnosis.
- To avoid any possibility of confusion the exact type designation and NSC part number should always be indicated.
- The current software version of the fire control panel as well as of the loop-card will be needed.
- Does the current version of the configuration software, control panel firmware and loop-card has been updated to the latest version?

If you are asked by our hotline to submit data for further analysis, we always need at least the diagnostic file (.NSD), the event memory (.ELG) with exact specification of the date and time or ideally the exact event number, as well as a precise fault description as possible, and the current programming (.NSC).

**Please send your data to: [support@nsc-sicherheit.de](mailto:support@nsc-sicherheit.de) and please understand that we cannot care about undemanded sendings.**
