

DANGERS OF LASER TATTOO REMOVAL

According to a current worldwide investigation that included the EEC (European Economic Community) and FDA (US Food And Drug Administration), an analysis of the consistent ingredients in tattoo pigment was done, and it was found that the pigment, when exposed to **LASER** irradiation, can cause serious health risks.

What this means is **LASER** tattoo removal can create unforeseen health risks long after the tattoo removal process has been done. Currently, there is no data that can disprove the potential risk for highly undesirable systemic health effects from **LASER** tattoo removal, in particular the long-term effects which may contribute to specific types of cancer.

According to world renowned UCLA Professor Richard Bennett, "The pigment from **LASER** removal settles in the lymph glands and can easily settle in other organs."

Tattoo Vanish®

Tattoo Vanish is the ORIGINAL **ALL NATURAL, NON-LASER (no acid or chemicals)** product and procedure available in the world. Since 2008 we have been the leader in successful tattoo removals. Our certified technicians can lighten or remove any unwanted tattoo. Below are some benefits to choosing this **ALL NATURAL** technology over other methods of tattoo removal.

TATTOO VANISH® VS OTHER METHODS:

1. The Tattoo Vanish Method has no color restriction and brings all of the ink, regardless of color, up and out of the body and not into your lymphatic system.
2. The Tattoo Vanish Method requires less sessions as it removes ALL colors with each procedure performed.
3. The Tattoo Vanish Method will cost less as it may not require as many procedures.
4. The Tattoo Vanish Method is result oriented as it “lifts” the ink out of the body and into a controlled scab which forms through the body’s natural healing process.
5. The Tattoo Vanish Method procedures are performed with a machine similar to what was used when receiving the tattoo. There is far less pain as an anesthetic is used prior to and during the procedure for your comfort.
6. The Tattoo Vanish Method is the safest medical method available as it is an **ALL NATURAL** product and proven medical procedure.
7. The Tattoo Vanish Method does not use glycolic acid or chemicals which can cause scarring due to burns received throughout the epidermis. These methods can produce surface scarring due to the “dermabrasion” process.

The Benefits of Choosing the **Tattoo Vanish®** Method

With so many different tattoo removal methods out there, why should you choose Tattoo Vanish to get rid of your unwanted tattoos?

It's the only all-natural tattoo removal method of its kind.

It gets the job done in fewer treatments.

It's more affordable.

It can get out all ink colors—not even laser tattoo removal can do that!

It gets rid of ink instead of absorbing it into your body.

It's safer and has fewer side effects.

It's less painful.

It's incredibly effective.

It's 100 percent free to schedule your Tattoo Vanish consultation.

Why settle for tattoo removal methods that are expensive and ineffective when you have a better alternative with the Tattoo Vanish Method?
