High-end Customized Sintered Stone

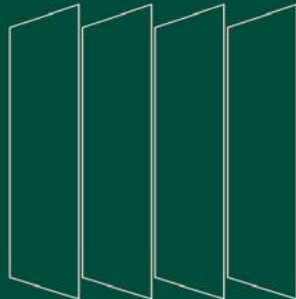

## BEST CASA

### INTRODUCTION TO SINTERED STONE

- Sintered stone is a new variety of facing material with advanced physical properties and multiple super superior features, which in combination with its unique advantages in all-around application (in indoor, outer wall, floor and other facings) has become a new favorite in sectors of building design, interior design and industrial design.
- Sintered stone is formed by high-pressure sintering of natural mineral materials, which mainly include granite mineral materials such as quartz and feldspar.
- Specifically, the natural mineral materials are processed, mixed proportionally and pressed under high pressure to form slabs; the slabs will be further treated with digital techniques such as APO, APBM, MDS, DDD and DDG to show various natural textures, and finally undergo  $>1200^{\circ}\text{C}$  high-temperature sintering in automatic kilns with strict temperature control to become finished products.

## THE BEST ADVERTISEMENT IS THE QUALITY OF THE PRODUCT

### Multi-dimensional cross-sector application

Use of cross-sector materials has expanded from application in home decoration to multi-dimensional application in customized overall home decoration.

### Applicability to high-end customization

Sintered stone may have diversified grains, thicknesses and specifications; it can be cut into different shapes as needed, and thus can be customized according to users' needs.

### Food-grade safety

Environment-friendly material for food contact use, allowing no room for growth of bacteria, and thus can be assuredly used in kitchens and dining hall areas.

### Healthy and nontoxic

Use of cross-sector materials has expanded from application in home decoration to multi-dimensional application in customized overall home decoration.

### Good anti-bacterial performance and stain resistance

Sintered under 1,200°C high temperature, it has good anti-bacterial performance and stain resistance; tea stains and dirt can be easily removed by wiping.

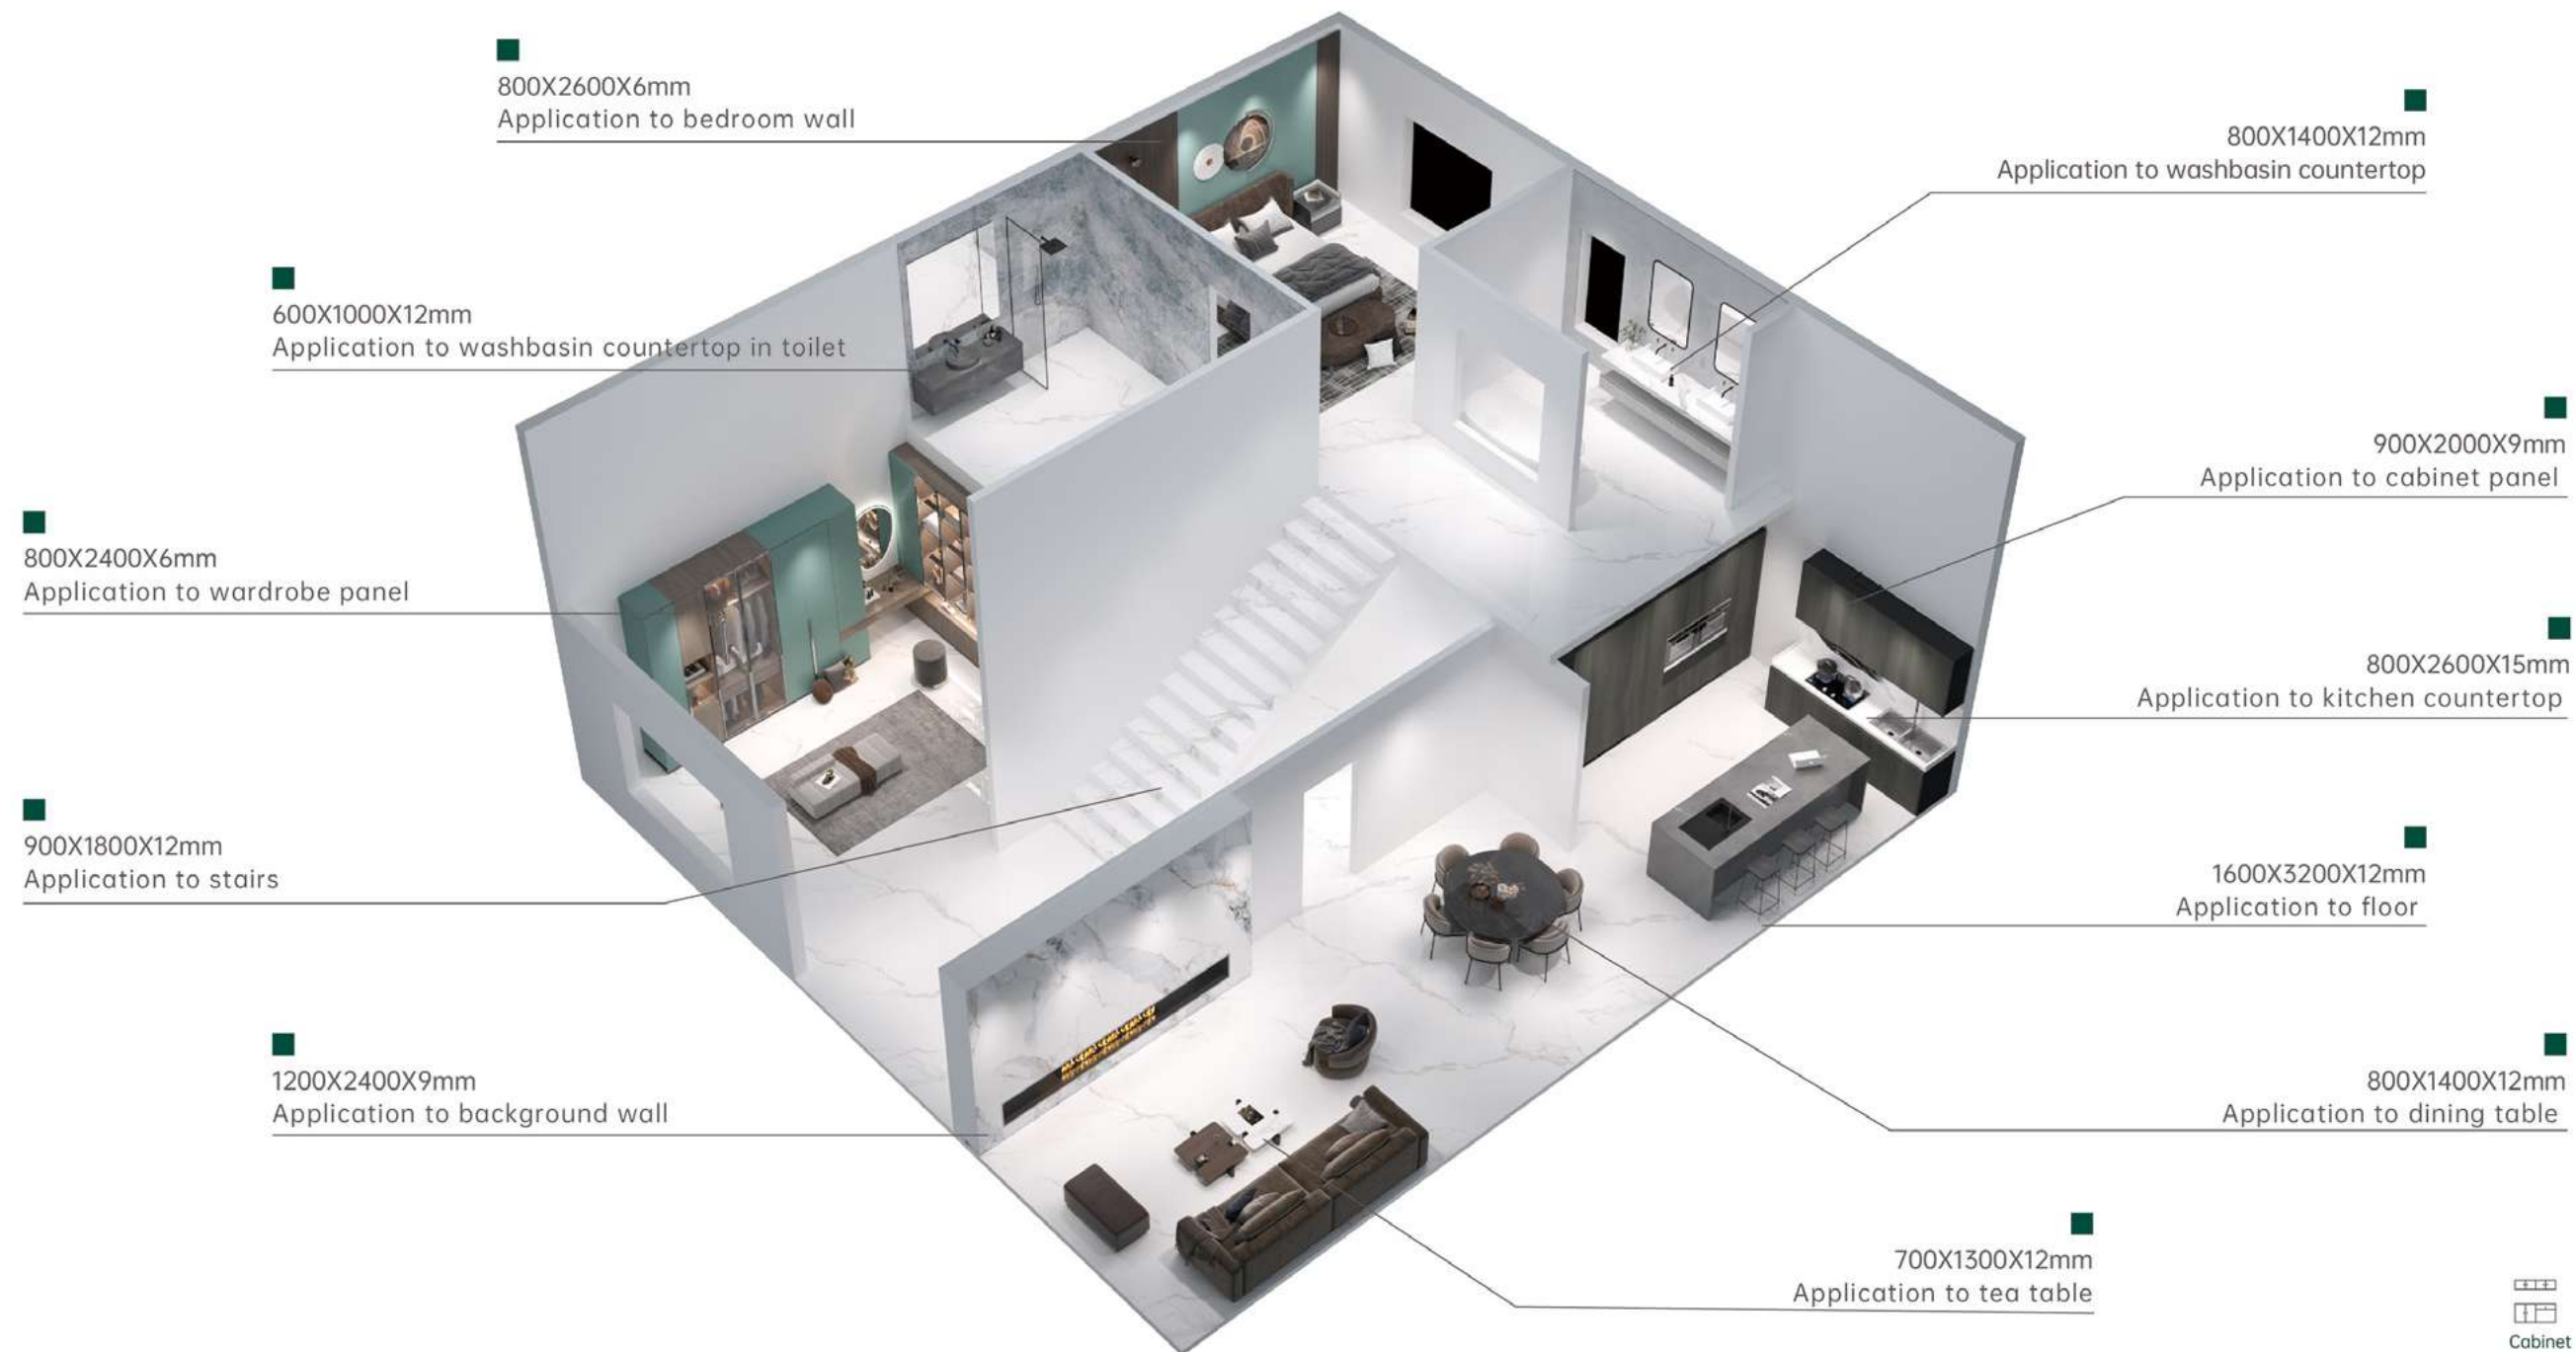

### Good resistance to scraping and abrasion

The sintered stone produced under high temperature and high pressure has attained level 6 Mohs Hardness, and good resistance to scraping and abrasion.
