“Learn Tomorrow’s Technology Today with Artificial Intelligence”

Mark Kembel
Founder A. I. Online Developer + Inc.
AI Software Engineering Training Firm

Mark’s success in his first company interTest.com was achieved by partnering with Volt and Microsoft to train Software Test Engineers for them.

5 years as a Microsoft Test Engineer and Manager

CEO and Founder of **interTest.com Inc.** a live training company that trained 200+ Testers for Microsoft.

Developer of Software Test Development Engineer, Machine Learning & Program Manager online courses.
Instructor at Green River Community College, Portland CC and Shoreline CC for Software Testing.

Marketing & Sales

I just got off the phone with a salesperson selling a contact's database . He showed me some cool features like who hits my website and all their contact information and who is looking for training from Google. They have all the college information and people in all industries that I want to reach. They use AI in the process of doing business. Their automation would take care of that. I was impressed by their system.

We will also do an SEO on the website to increase hits and business. This may happen by the end of August 2025. This will increase both our AI Course Sales and AI Consulting Business. We signed up several AI development companies to handle our consulting division.

We're developing an innovative AI-powered software integrated with augmented reality (AR) glasses to revolutionize cancer detection and surgical procedures. This technology overlays real-time imaging data directly into the surgeon's field of view, enhancing precision and reducing reliance on external monitors. Our AI system analyzes various medical imaging modalities—CT scans, MRIs, and X-rays—to detect multiple cancer types, including breast, lung, prostate, colorectal, pancreatic, skin (basal cell carcinoma, squamous cell carcinoma, melanoma), and brain cancers. Early cancer detection for removal before it spreads. Code to be done in January 2026.

Once the cancer code is completed and tested with Vision Pro glasses the product can generate huge profits from charging the hospitals a yearly subscription fee for its use. Allowing the hospital to use it as many times in one year to spread the cost down. We charge the hospital \$40K full use, and \$20K partial use without the surgery option. With presales at \$30K we can generate \$19 Million in 2026 in sales for international and US not counting AI Training or Consulting Services.

Research Summary

I'm developing a groundbreaking AI-powered software integrated with augmented reality (AR) glasses to transform cancer detection and surgical procedures. This innovative technology enables real-time identification of cancerous tissues, assisting surgeons during operations and reducing reliance on external monitors. By overlaying critical imaging data directly into the surgeon's field of view, it enhances precision and efficiency in the operating room.

Vision Pro Summary

Applications in Cancer Surgery

Applications in Orthopedic Surgery

Apple Vision Pro in Heart Surgeries

Our AI system is designed to analyze various medical imaging modalities, including CT scans, MRIs, and X-rays, to detect multiple cancer types such as breast, lung, prostate, colorectal, pancreatic, skin (including basal cell carcinoma, squamous cell carcinoma, and melanoma), and brain cancers.

All these surgeries listed in the middle of the page are on our list for developing a program for using Vision Pro in surgeries.
