**Seeking Co-Founder & Investor for AI-Powered Cancer Detection Startup**

I'm Mark Kembel, founder of AI Online Developer +, a pioneering health-tech startup at the intersection of artificial intelligence and augmented reality. Our mission is to revolutionize cancer detection and surgical precision through innovative technology.

**About the Venture**

We are developing an advanced AI-driven software platform integrated with augmented reality (AR) glasses. This system enables real-time identification of cancerous tissues during surgical procedures, overlaying critical imaging data—such as CT scans, MRIs, and X-rays—directly into the surgeon's field of view. This innovation enhances surgical accuracy, reduces reliance on external monitors, and aims to improve patient outcomes.

Our technology is designed to detect multiple cancer types, including:

- Breast
- Lung
- Prostate
- Colorectal
- Pancreatic
- Skin (basal cell carcinoma, squamous cell carcinoma, melanoma)
- Brain cancers

**Investment Opportunity**

To advance our development and bring this transformative solution to market, we are seeking a co-founder with the capacity to invest $100,000. In exchange, we offer 20,000 shares of Preferred Stock. This initial funding will contribute to our broader goal of raising $6 million to fully realize our vision.
