- Motion sensors are completely wireless and utilize existing power from rooftop equipment, like HVAC
- There is no limit to the number of motion sensors or number of buildings being monitored 24/7
- Motion alarms can be custom set for sensitivity to avoid false alarms
- Existing alarm systems are ineffective as they are disarmed during the day
- There can be multiple people receiving alerts from the same buildings or individual sensors
- Motion sensing is more cost effective than security cameras that require wiring into the building
- 24/7 security prevents copper or metal theft from the rooftop
- Motion sensing can verify that facility maintenance has been to the rooftop
- All motion events are logged on the phone app for time, day and through text alerts
