

GLA Weed/Algae/Sediment Program Report – February/March 2020

(Submitted 4/2/2020)

At the February 2020 GLA Board Meeting, the Board of Directors approved a motion to accept the proposed contract from Rollins Aquatic Solutions at a total cost of \$33,934 for lake management services to be performed on Beaver, Goose, and Lincoln Lakes during the 2020 season. This contract includes unlimited algae treatments, spot treatments of up to 41 total acres for problematic submerged vegetation, and (5) monthly sediment control treatments in the Goose Lake channel areas totaling 8.5 acres during the months of May, June, July, August, and September to help reduce the muck/sediment on the lake bottom.

Rollins will begin the 2020 contract during the first week of April by performing full lake inspections on all 3 lakes and will be performing weekly treatments as needed through the end of September 2020. As done in the past, any chemical treatments that are performed in lake areas with problematic submerged vegetation will be communicated by a published “Water Use Restriction Notice” to those specific property owners affected a minimum of 2-3 days in advance of the treatment date.

Respectfully Submitted By,

Joe Turk
