

GLA Weed/Algae/Sediment Control Committee Report

(March 25th , 2019 GLA Board Meeting)

Rollin's Aquatic Solutions is gearing up for the start of the 2019 Weed/Algae/Sediment Control Contract which is scheduled to start April 1st and end October 1st of 2019. Rollin's will be on site 1 day each week (normally Wednesday's with Thursday as a possible make-up rain date) during this period to inspect and treat Goose, Beaver, Half-Moon, and Lincoln Lakes as required.

As a result of an early algae bloom in the Goose Lake finger channels, Rollin's has been made aware of the situation and will try to come out a week earlier than contracted to assess the situation and perform an algae treatment where needed if the water temperature reaches the required minimum of 50 degrees F which is needed for the algaecide to work properly. Please note that no "Water Use Restrictions" will be required whenever algae treatments are performed.

Submitted,

Joe Turk
Weed/Algae/Sediment Control Committee Chairperson
