

A service for Lincoln Lake has been completed today at Jul 05, 2024 02:45PM. Your property was visited by boat. Below is a list of products used, services completed, observations made, and any restrictions that may apply to your body of water. If you have any questions, please feel free to reach out to info@mccloudaquatics.com.

Description of work completed:

Visited the 4 places marked on David's map. Windy wavy rainy conventions over the past few days must have knocked out any film build-up. I did see some Osilitoria which looks like a peeling bottom sediment. It can look clumpy like planktonic but is very different. No treatment required today.

Lots of boaters and skiers today.

Service(s) Provided on Today's Visit:

Standard Pond/Lake Contract

Duckweed - Contract
