911inform Connected Building

Demo High School

911inform is a notification and emergency management solution providing state of the art tools to effectively mitigate emergency situations. This easy-to-use application requires no additional software to install and no equipment to replace.

911inform offers the following options to help you achieve your security objectives.

- Option 1 - Compliance - Ray Baum's Act and Kari's Law – any 911 call made from the phone system must deliver a dispatchable location to the PSAP and on-site personnel. In addition to the street address, it mandates specific location details including room, floor, or other information. Through RapidSOS, a detailed map overlaid with valuable assets is provided to first responders immediately. This map identifies where the 911 call was made and presents that location to the 911 operator and designated Demo High School staff members for up to 24 telephones.
- Option 2 - Compliance and Geofencing – Includes Option 1 plus notifications when 911 calls are made from cellular phones within your property. In addition to the PSAP, Demo High School's designated personnel will also have visibility to all emergency calls made from anywhere within property boundaries. This provides comprehensive awareness to all emergency calls made within Demo High School's geofence and phone system.
- Option 3 - Comprehensive Bundle - includes Option 2 plus Connected Building. This enables access to existing building technology with up to 4 Doors for access control, 5 security cameras for live video streaming. Integration to paging systems for automated messaging. Access to building technology is provided to anyone needing it during an event and removes access to everyone when the event is closed.

I have outlined the investment price of each option on the next page.

Demo High School 911inform Options

Option 1 – Compliance
