

A74387_AM7MG_VIA Update 130909

Dennis Lake Viewpoint

1

“BCTS manages for the scenic areas in the Clearwater inventory, although not legally required to do so.”

“The AREA 6 report (prepared by RDI in 2012) didn’t really address cut block AM7MG as the viewpoints were from the highway only”.

Bert Middleburg, BCTS, September 6, 2013, by email

“This block falls in a polygon with VSC3. We have to meet PR or M”

Frank Kohlberger, BCTS, September 6, 2013, by email

“My evaluation of the block as depicted in the A74387_AM7MG_Draft VIA-1 image, and subsequent high-resolution images presented above (from a point near the top end of the lake) is that it is well-designed, meets lines-of-force, benefits from shoreline screening, and easily meets the visual quality class of Partial Retention, with the latitude of Modification, if required, given the range offered by VSC3.”

Ken Fairhurst, RDI, September 6, 2013, by email

(RDI tested visibility from the highway only in its initial report and found the block to be non-visually sensitive - KF)
