

MediXtracts

FACTS Vol. III

Your compounding pharmacy team at MediXtracts Therapies Inc. (MTI) is working to improve your transdermal MTI pain formulas for each of your prescriptions.

Have you noticed a prescription sheet being included with your refills? We at MTI want to make sure our patients have the ability to provide their doctors with the right information they need to fill a new prescription for you. If your remaining refills are getting low (see cream label), please have your family doctor complete the included prescription sheet or simply provide MTI with your family doctors information and we can contact them directly on your behalf.

Is the frequency or volume of your pain cream shipments overloading your needs? MTI is here to customize your prescription refill frequency and size at any time, just let us know! Our stability testing has proven a shelf life beyond 60 days allowing us to provide you with stable pain relief for this extended period.

MTI's over the counter (OTC) version of our transdermal pain cream has been tested and has a proven ability to treat multiple pain conditions. Ask us how you, a valued MTI patient, can obtain an exclusive OTC sample to try with your next shipment.

Less is More!

Our formulations are compounded daily with careful attention to accuracy. The goal is to provide the same fast, penetrating pain relief for each and every one of your prescriptions.

Our transdermal cream therapies work best when all of the APIs are chemically and physically compatible allowing for full dissolution.

How to Use: One pump provides approximately one gram of cream which is often adequate for one knee for example.

Use an appropriate amount for your target pain areas and rub in well.

Do not apply direct heat to the area within 30 minutes.

Wash your hands thoroughly with warm soap and water after applying,

Do not get cream into eyes and keep out of the reach of children and pets.

Avoid direct sunlight on treated areas for at least two hours and stop using the cream if rash or blisters/boils occur.

Visit medixtracts.ca for any of the previous MTI Facts Volumes.
