

## **Belmont** Phot-XIIS DC X-Ray

Intraoral X-Ray with LCD Panel

The Belmont PHOT-XIIS LCD produces superb radiographic images and minimizes patient exposure to radiation during dental imaging. Its sleek, aesthetic design makes it a natural choice for any dental operator.

- Intuitive and easy selection of tooth type, cone type, film / digital modes, film speed, kV, mA and patients size.
- The tube head is lightweight, compact and easy to hold. This enables the operator to align the tube head accurately every time.
- LCD display view can be customized for operator preference.
- Tooth density ratio settings can be adjusted from the default setting for each tooth.
- If darker (or lighter) radiographs are preferred, the sensitivity setting can be adjusted manually.
- High resolution image by a small focal spot
- Reduced skin dosage with optimum radiation level for every diagnostic need
- Ideal matching for digital imaging system
