BOARD - BATTENart - SERIES

Board and batten is a type of cladding that consists of thin strips called battens, alternated with wider boards or planks. We have combined both pieces creating our insulated, exterior rated board and batten moulding. Placing battens over boards creates an aesthetic, textured, and layered effect with chic and rustic vertical lines. Although decorative, the resulting cladding can be durable and resistant to harsh weather conditions. Our board & batten moulding has a cementitious coating with a polystyrene insulating core. Precut drainage channels are cut through the entire piece of moulding. All materials are fully meshed for exterior applications and offer an R5 - R8 value on our standard pieces. The moulding is available coloured. Typically, the moulding is finished on site with a coat of exterior paint of any desired colour. Our board & batten siding is available in 3" to 14" in width. Custom sizing is available upon request.

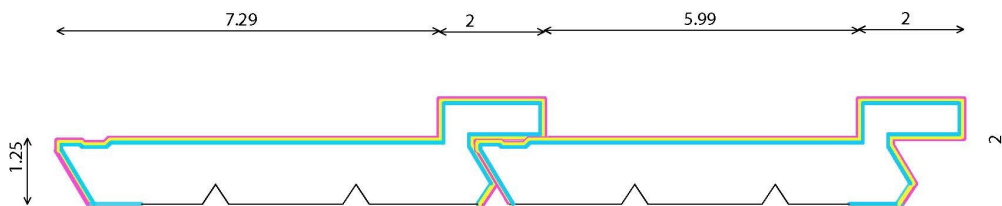

EXTERIOR MOULDING: BOARD - BATTENart-26

DIMENSIONS All dimensions are in inches

Standard Sizes: 3"W to 14"W.

*Custom sizes available.
