Industrial Hygiene – Crystalline Silica in the Workplace

Crystalline silica accounts for 12% by weight of the earth's crust and is present in most rock and soils and many construction materials. Chronic and acute respiratory disease associated with occupational exposure to airborne respirable crystalline silica (RCS) has been observed through history. It is essential to understand the working environments in construction, mining and general industry where silica dust is present in order to take the necessary precautions for workers' health.

Location:

**Clarios
5757 N Green Bay Ave
Florist Tower
Glendale, WI 53209**

Date / Time:

Thursday March 19th, 2020

Registration & Lunch

11:30 AM-12:00 PM

Presentation and Questions

12:00PM - 1:30 PM

Cost:

\$25 – Lunch Included

Who Should Attend:

Everyone with potential exposure to crystalline silica in the workplace (Industry/Construction)

Presenter: Stephen Patterson, CIH, CHMM

Industrial Hygiene Global Program Leader - Clarios
