

The process to export from Turkey is as follows in chronological order:

1 Microchip dated in the vet book

2 Rabies vaccination (this can be the same date as above)

3 30 days after the vaccination a vet must take a blood sample for a titre test in in Ankara.

4 Providing the sample is satisfactory, there is than a 3 calendar month waiting period, before your dog can be exported into the EU.

5. 2 or 3 days prior to export of your dog must have anti parasite administered by your vet then you and "sometimes" your dog must go to the local Tarim office (Dept of Agriculture) and gain the export document which is valid for 10 days for the date of Issue to the exit from Turkey.

Please see other download Sample cert this is what you need to gain from the Tarim office you DO NOT complete it the red text is for your guidance. You must pay particular attention to page 3 and the notes at the top
