

Veeva Sunrise User Interface: Summer 2018

What we love about the new Sunrise User Interface: Enhanced User Experience

- ✓ Available on iPad and iPhone (Aug 2018)
- ✓ Available on Windows tablets (Dec 2018)
- ✓ Intuitive, color-rich widgets follow familiar IOS layout
- ✓ More efficient use of real estate on screen - which means more information, less clicks
- ✓ No setting changes or configuration required – changes will be part of usual, seamless system update

End-User Resources from Veeva

- ☞ Quick start guide
- ☞ Current and New Screen Shots
- ☞ Day-in-the-life video

Prepare your Existing Users

Build Excitement by communicating about, and showing, the new Veeva Sunrise UI.

Set expectations so teams know how their daily activities will be supported by the new UI.

Alleviate any concerns about functionality changes – there aren't any. This change is all about the user interface and enhancing the user experience.

Communicate timelines making sure your teams know they don't have to do anything to get the new look – the update will be seamless.

Provide resources to answer any questions and provide guidance. Be sure to leverage the resources, list above, provided by Veeva!

Time to Refresh your Training for New Hires / New Users!

Did you know that many of the Veeva training designs out there are over 15 years old? The new look of Veeva reflects the new attitude towards technology tools and so should the training. A lot has changed in the world of training with a fresh, high-energy approach to designing all modes of training solutions.

With Millennials becoming the majority of the working population, there's more demand than ever to make all modes of training more interactive, engaging, and social. With "Engage the Learner" being our credo at T2Ops, we're excited about the direction that training design is headed!

eLearning | Today's "bite-sized", micro-learning approach revolutionizes how eLearning is developed and studies show learners retain and adopt the information more effectively. It also makes it much easier to make changes with future system updates, so you're no longer stuck with an outdated look, feel and obsolete content.

Web-based Training | The improved visualizations add more color and energy to your webinars. Build on that energy by designing virtual training that promotes more interaction with the application and between your participants!

Live training | Take advantage of the opportunity to bring together the best of both worlds - human interaction and interaction with the technology! Create a learning experience that is solution-based and action-packed tackling real-life challenges while learning from each other's experiences.

How-to Videos | Develop cost-effective and time-efficient quick-tip, how-to videos that can be accessed anytime, anywhere to reinforce the training and serve as quick reference.
