

# IS THERE A GOD?

# HOW CAN I KNOW?

# WE HAVE AN AMAZING HUMAN BODY!

- **Trillions of cells, with literally billions of nerve cells & miles of blood vessels.**
- **Incredible human body functions such as thought, senses (touch, smell, taste, sight, etc.), sexuality, childbirth, and many other items.**
- **Each body has eyes, hands, brains, legs, lungs, heart, liver, kidney, reproductive organs, a head, etc., each with incredibly sophisticated capabilities.**
- **Each cell in the human body contains trillions of ultra-sophisticated molecular machines, each with amazing critical functions and capabilities.**
- **Childbirth perfectly merges the DNA of two people into a new unique person.**
- **There is enough DNA information capacity in a single human cell to store the entire Encyclopedia Britannica three or four times over.**
- **And much, much more.**

**JUST MEDITATE ON ALL THE MIND-BLOWING  
CAPABILITIES OF THE HUMAN BODY**

# THERE IS AN ASTOUNDING ANIMAL KINGDOM

- **There are over 8.7 million different animal species, and over 10 billion billion individual animals on earth.**
- **Each species has incredibly sophisticated and different designs and complexity.**
- **Examples include tiny ants, birds, insects, dogs, cats, tigers, giraffes, massive elephants, hippopotamuses, pigs, rabbits, monkeys, whales, fish, dolphins, and so many more.**
- **Countless species have incredible mind-blowing capabilities (see website).**
- **There are over 1.2 million different plants, protozoa, and chromists on earth.**
- **Scientists also estimate that 86% of existing species on Earth and 91% of species in the ocean still await discovery and description.**

**JUST THINK ABOUT BEING OUT IN THE OPEN SPACES  
WITH ALL THE TREES, MOUNTAINS, THE BEACH, THE OCEAN,  
AND/OR THE ANIMALS IN A ZOO OR IN THE WILD!**

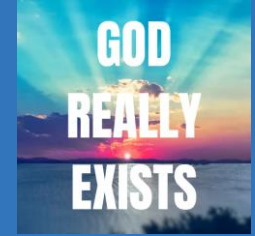

# WE LIVE IN AN INCREDIBLY EXPANSIVE UNIVERSE

- **There are over 10 million billion stars in the universe.**
- **There is an incredibly large and complex sun (you can put over one million earths plus 4.3 million moons in the sun!)**
- **Venus is 26 million miles away, Mercury is 50 million miles away, Jupiter is 367 million miles away, Saturn is 790 million miles away, Pluto is 2.7 billion miles away.**
- **There are billions of miles between all the stars.**
- **There are numerous improbable and fine-tuned factors that must be precisely in place and balanced for the survival of life on earth. Without any one of these factors, life would not be possible.**
- **And much, much more.**

**JUST THINK ABOUT STAR GAZING LATE AT NIGHT TO AN OPEN SKY  
OR THROUGH A TELESCOPE!**

# WHERE DID EVERYTHING COME FROM?

- All of these amazing facts scream out the following key question: Where did all these creatures and mind-blowing capabilities come from?
- Could this possibly be the result of a random process of evolution, or do they point to a creator who designed everything to function as it does?
- Where did the universe come from and if you believe in the Big Bang Theory, which does make logical sense, how did that happen and where did that come from?
- Can we really believe macro evolution, creating one species randomly from an entirely different species, is logical or possible? Can we really believe that humans - with all their incredible capabilities as described above – evolved randomly from another species? Doesn't it make more sense that all of the incredible above facts are the result of a designer and creator God?

**ALSO AGAIN, IN ANY CASE,  
WHERE DID THE VERY FIRST LIFE FORMS COME FROM?**

# EVOLUTION VS CREATION DEBATE

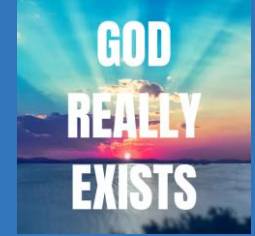

- **The Theory of Evolution, originally presented by Charles Darwin, essentially states that all forms of life are constructed from the same basic elements, and that humans are the result of a long series of evolutionary changes. Thus, humans were not created by God, they simply evolved from other life forms.**
- **While there is no question individual life forms evolve by natural processes over time and one should not question the related science, there is no clear scientific evidence that one life form (i.e. - a dog, cat, bird, etc.) can, in fact, evolve into another materially different life form (i.e. - a monkey, donkey, tiger, etc.). It's hard to buy the argument that it's just a matter of time for this type of species-to-species macroevolution to occur.**
- **Also, can we really believe that all of the above described dramatically different creatures in the world – worms, bunnies, dogs, cats, giraffes, elephants, tigers, lions, hippopotamuses, cows, snakes, birds, monkeys, whales, seals, etc. and ultimately humans – evolved completely randomly?**

# OTHER CONSIDERATIONS

- **The probabilities of the scope and scales of the universe and the complexities of its contents (humans in particular), as noted in all the above, make random coincidental creation difficult or impossible to accept. A more correct evaluation of this evidence supports the fact that everything in nature proves God exists as Creator and Designer.**
- **Humans have an inborn sense of right and wrong and love, as well as a sense that there is something more. Where did that come from?**
- **There are many documented cases of very meaningful God Experiences in individual lives (See Blog and website references on this topic), including dramatic life transformations.**
- **The incredible consistency, reliability, and the depth of the Bible support the case for God and explain who God is and what it all means (again see blogs and website references on this topic).**

# CONCLUSION

- **Based on all these facts and considerations, do you now believe – or are you open to the possibility – that God really exists?**
- **If this is all true, this is the most critical and important consideration in your life. We encourage you to review the website [www.godreallyexists.com](http://www.godreallyexists.com), along with all the included blogs and cited references. Also, think about the Next Steps section of the website.**
- **If you are not sure you believe, contemplate the question “What If I am wrong”?**
