BILLET *The next generation of custom wheels has arrived!*

We utilize in house aerospace technology & computerized robotics to produce 2 piece billet wheels unmatched in the industry!

We offer an entirely new concept of wheel design & construction, bringing fresh new attitudes and ideas for custom wheel buyers.

Centers are fully CNC machined from a solid block of 6061-T6 Aluminum billet, then mig welded into 5000 series aluminum rims for maximum strength in style and design.

**For years
we have
machined
only the
finest,
high-precision
Billet Aluminum
for the Apache
Fighter Chopper.
Now we are
applying the
same
space-age
technology
to our
True Billet
line of
High
Performance
Wheels.**

Our commitment to Space-Age quality standards is visible in every wheel we make!

Since our beginning, Colorado Custom has sought to catch the imagination of car and truck enthusiasts and bring excellence to them in the form of our wheels. We have created a higher standard of design, engineering and manufacturing for our customers to depend on receiving each and every time they purchase a Colorado Custom product. From the highly sophisticated aerospace machinery used to produce Colorado Custom wheels, to the craftsmen who make them, we give each wheel the same precision engineering as though we were producing a part for the Apache helicopter. In fact, the parent company, Manes Machine & Engr., utilizes the same equipment and personnel to provide products to Boeing and McDonald-Douglas. The same company which provided parts used to support our men and women in Desert Storm are now providing the finest in custom wheels for "Stylin" in the USA.

ISO 9000 Standards

ISO-9000 is an aerospace industry standard for quality system control. Each wheel is put to the test by our own in-house team of "Quality Control Inspectors". Using the latest techniques, including "SPC" (Statistical Process Control), as a tool for controlling variances in a wheel's dimensional characteristics. A set of "key characteristics" are selected for each style of wheel, they are then plotted on X-bar and Moving Range charts to eliminate possible problems, such as excessive variance. Using this aerospace technology, and the latest CNC-milling centers, Colorado Custom can ensure its customers that they are receiving a wheel that has been precision machined to the tightest possible tolerances.

Our History

Manes Machine & Engineering was started in 1982 in Corona, Ca. and moved to Ft. Collins, Co. in 1992. The company provides precision machined products to the aerospace industry under private contracts. Expanding into the aftermarket wheel line in 1994 under the brand name of Colorado Custom, has allowed us to diversify and expand into new arenas. Our future is tied to satisfying the needs of a broad spectrum of customers, none of which will receive anything but our finest efforts.
