Cockroach Treatment Preparation Sheet (Residential)

In cockroach control, sanitation is essential. The following steps must be taken before we will be able to perform a cockroach treatment.

Items That Must Be Completed Prior To Our Arrival:

- ☐ Empty all kitchen cabinets/cupboards and sweep behind stove & fridge area if possible.
- ☐ Pick up and remove any trash inside of unit.
- ☐ Furniture and other items should be moved out at least 2 feet from walls if possible.
- ☐ Pets must be removed from inside prior to treatment. Fish tanks should be covered. If fish tanks are covered, the air pump should be shut off.
- ☐ Children's toys and pet food dishes and exposed food should be sealed or placed in a protected area.

After Our Treatment Is Complete:

- ☐ Do not re-enter the premise for at least 4 hours unless specified otherwise. If you have medical problems or are sensitive to odours, it may be advisable to stay out longer.
- ☐ In roach control, sanitation is essential. Do not leave empty milk or beverage bottles inside. Keep areas under and behind stoves and refrigerators clean. Do not allow food and garbage to accumulate in areas where roaches feed or hide. Pet food should be stored in sealed containers.
- ☐ It is normal to see more roaches for up to a week after treatment due to the bait & chemical attracting them to come out of hiding. If you have any questions before or after treatment please call or email us.

Thanks for your co-operation!
