

SISTERS IN ENERGY

Monique M. Dyers, P.E.

Monique M. Dyers, P.E. has nearly two decades of experience in the energy sector, and has contributed to several different fields including engineering, consulting and renewable energy. From her start in manufacturing at Caterpillar and throughout her career, Monique has found a passion for the industry's dynamic nature, as she has witnessed the growing acceptance of renewable energy in Colorado.

Throughout her leadership as Principal and CEO of Enight Energy, Monique has cultivated a diverse team of individuals who are devoted to the achievement of their clients. Under her leadership, the team has forged close, trusted relationships with clients, often becoming an integral extension of their teams.

Additionally, Monique served as the spearhead of several cutting-edge energy projects that have driven innovation and progress within Enight Energy. Most notably, as part of its American-Made Solar Prize competition, the National Renewable Energy Laboratory (NREL) awarded Monique and her team \$75,000 for developing a platform for underserved communities, farmers and tribal entities to effectively leverage their land for solar energy development.

Central to Monique's motivation is the belief that everyone deserves a place in the clean energy transition, and her work is a representation of her commitment to providing access and opportunities to underserved communities.

Looking ahead to 2024, Monique envisions continued growth for both Enight Energy and herself as the leader of a women- and minority-owned company. She aims to lead Enight Energy to be a valuable contributor to the clean energy transition whose impact will shape the future of the space.

For Monique, the recognition of receiving the Sisters in Energy Award is a powerful affirmation of the presence and achievement of Black women within the energy sector.
