

Carports

Sizes

A big part of customization in the steel building industry is the ability to customize sizing! Width can span anywhere from 10 ft. to 60 ft. and length can be as short as 10 ft. and as long 200 ft! Legs can go up to 20 ft. tall.

Site-Prep

Prior to the delivery of your building, it is crucial to ensure your site is level. We recommend the ground be level within 4 inches front to back and side to side. Buildings with vertical siding need to be level within 1 inch. Improperly prepared sites may delay the setup or construction of your structure and result in additional fees.

RV and Boat Covers

Blueprints and Permits

Customers are fully responsible for checking local building requirements to see if any permits are required to construct the building. Ask your dealer for details about generic and site specific blueprints.

Lean-To Addition

Lean-tos offer versatile options for your building. You can add a lean-to as just a cover, include partial or fully enclosed storage, or even build a freestanding lean-to. Lean-tos can be installed on the gable end, sides, or wrapped around the corner of your building for added flexibility.

Barns

Residential Garages

Heritage Steel did a phenomenal job installing our new carport. Very professional, polite, and kept the work sight clean. Whole experience with Heritage Steel was easy and recommend them to anyone. JOB WELL DONE!!
- Phil S.

Everyone was courteous, quick to respond, and efficient. I have no complaints out of anyone I have dealt with. The three orders I have with the company was completed in the time frame slotted and to perfect standard. Will recommend anyone to Heritage steel and will use them for my further needs.
- Jonathan C

Commercial Buildings

Colors

Customize your roof, trim, siding, and window colors! All buildings come standard with 20 year metal (certain colors available only in premium 40 year metal). Colored screws can also be added for an additional fee to match your building.

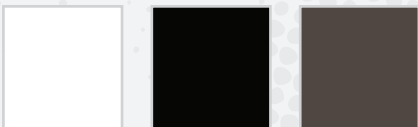

Colors available in 20 year and 40 year paint coating

Colors only available in 40 year paint coating

Window Colors (comes standard in white)

Fiberglass Insulation

Rain-X Condensation Barrier

Options

Insulation and Condensation Barrier

Choose between our Rain-X condensation barrier to aid in high moisture climates or fully insulate your building with our r-9 value 2" fiberglass insulation.

Walk-In Doors

We have a steel insulated house door, a 9-lite insulated house door, or mobile home style door to choose from when customizing your building. Alternatively, you can add a walk-in door frameout and install your own door as well!

Windows

Adding windows increasing curb appeal and natural lighting for any building. Choose between 24" x 36" windows or 36" x 36" insulated windows.

Garage Doors

Our standard roll up garage doors come as small as 6' x 7' and go as big as 14' x 14'. We also work with a third party to install custom size panel doors.

Frameouts and Corner Kits

Frameouts can be used for custom size windows, doors, porch openings, and more! A corner kit is used in place of a frameout if you want a frameout look on the gable end of a building that is over 24' wide with the siding being 2' wide coming from the edge. Ask about 45 degree trim kits on frame out and garage door openings!

Roof Pitch and Overhangs

Roof pitches can be upgrades from 3/12 to 6/12 pitch. Additionally, standard roof overhangs can be upgraded from 6" to 10" overhang.

Anchors

30" Rebar anchors come standard on all residential buildings 24' wide and smaller. Ground auger anchors are used for buildings 26' wide and larger. Asphalt anchors and Red Head concrete anchors are used when applicable.

Wainscoting

Wainscoting refers to a 3' tall metal panel of a different color that goes around the bottom of your building giving it a 2-tone look. For buildings with horizontal siding there is no extra cost, vertical wainscoting is available for an additional fee.

Foam Closures

Foam closures are offered for ridge caps and corners of buildings to add an additional sealing component to buildings needing temperature control.

Why Heritage?

We build strong structures, serve people well, and use our success to make a real difference. Our purpose is to uplift vulnerable children by creating hope, safety, and opportunity for a brighter future.

Life-Time Rust-Through Warranties

- We warranty our 14-gauge galvanized steel tubing AND premium vertical metal panels for the LIFETIME of your building against rust-through.

Extended Workmanship Warranties

- 3 year warranty on all workmanship.
- 7 year warranty on all workmanship for fully enclosed buildings 26' and wider that are installed on a level concrete surface

Additional Rust-Through Warranties

- All standard vertical 29-gauge roof panels are warranted for 30 years against rust-through.
- All standard horizontal 29-gauge panels are warranted for 20 years against rust-through.
- All premium horizontal 29-gauge panels are warranted for 40 years against rust-through.

Delivery Guarantee

- You'll get 5% off your purchase if it isn't delivered on time*
