

Existing Energy from Waste facilities around the world in proximity to large residential populations

This document provides a graphical illustration of Energy from Waste (EfW) facilities in major cities around the world. It shows that there are numerous major global cities that have EfW facilities located very close to large residential areas (with tens of metres).

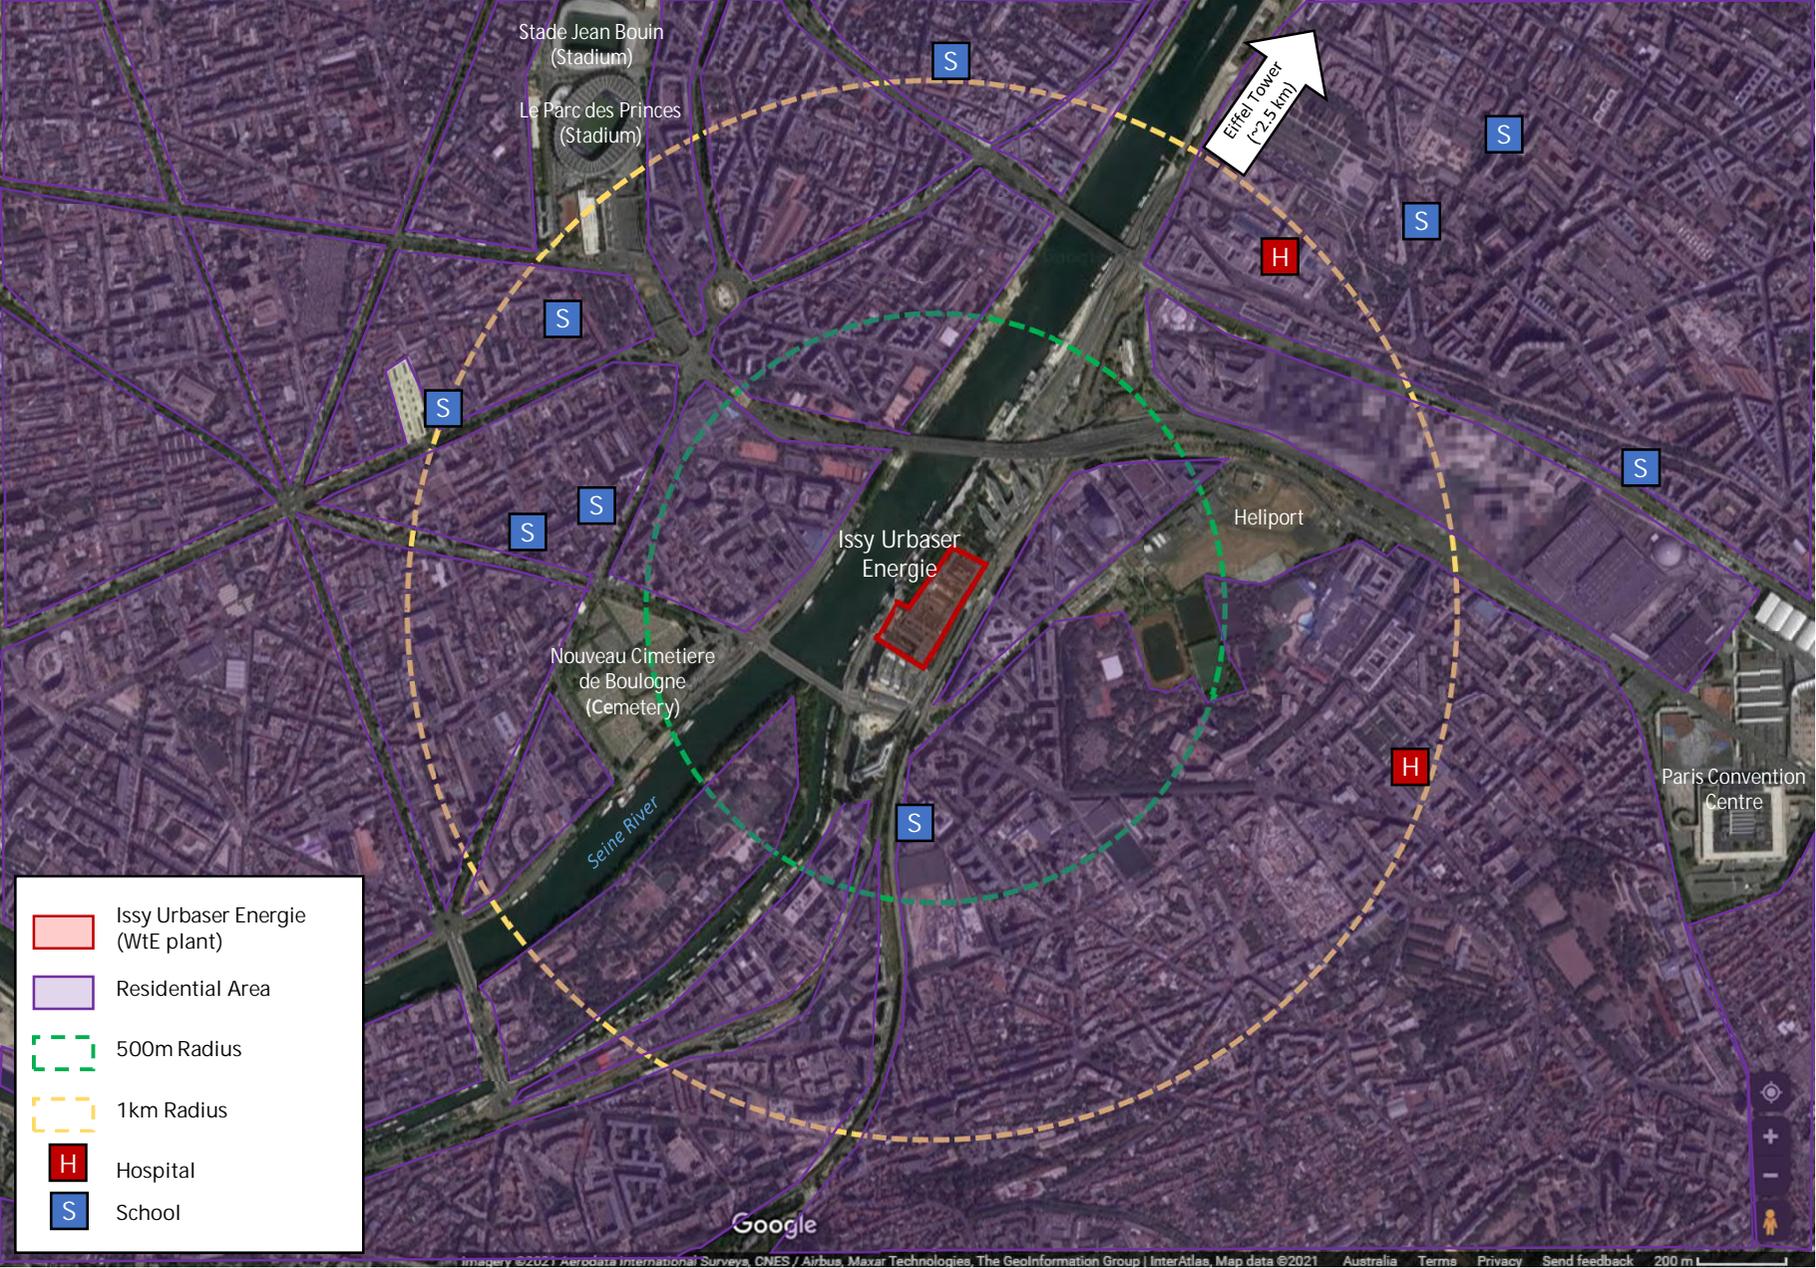

The purple shaded areas are residential areas and we have also marked schools and kindergartens as "S" and hospitals as "H".

South East London Combined Heat and Power EfW facility (SELCHP), London

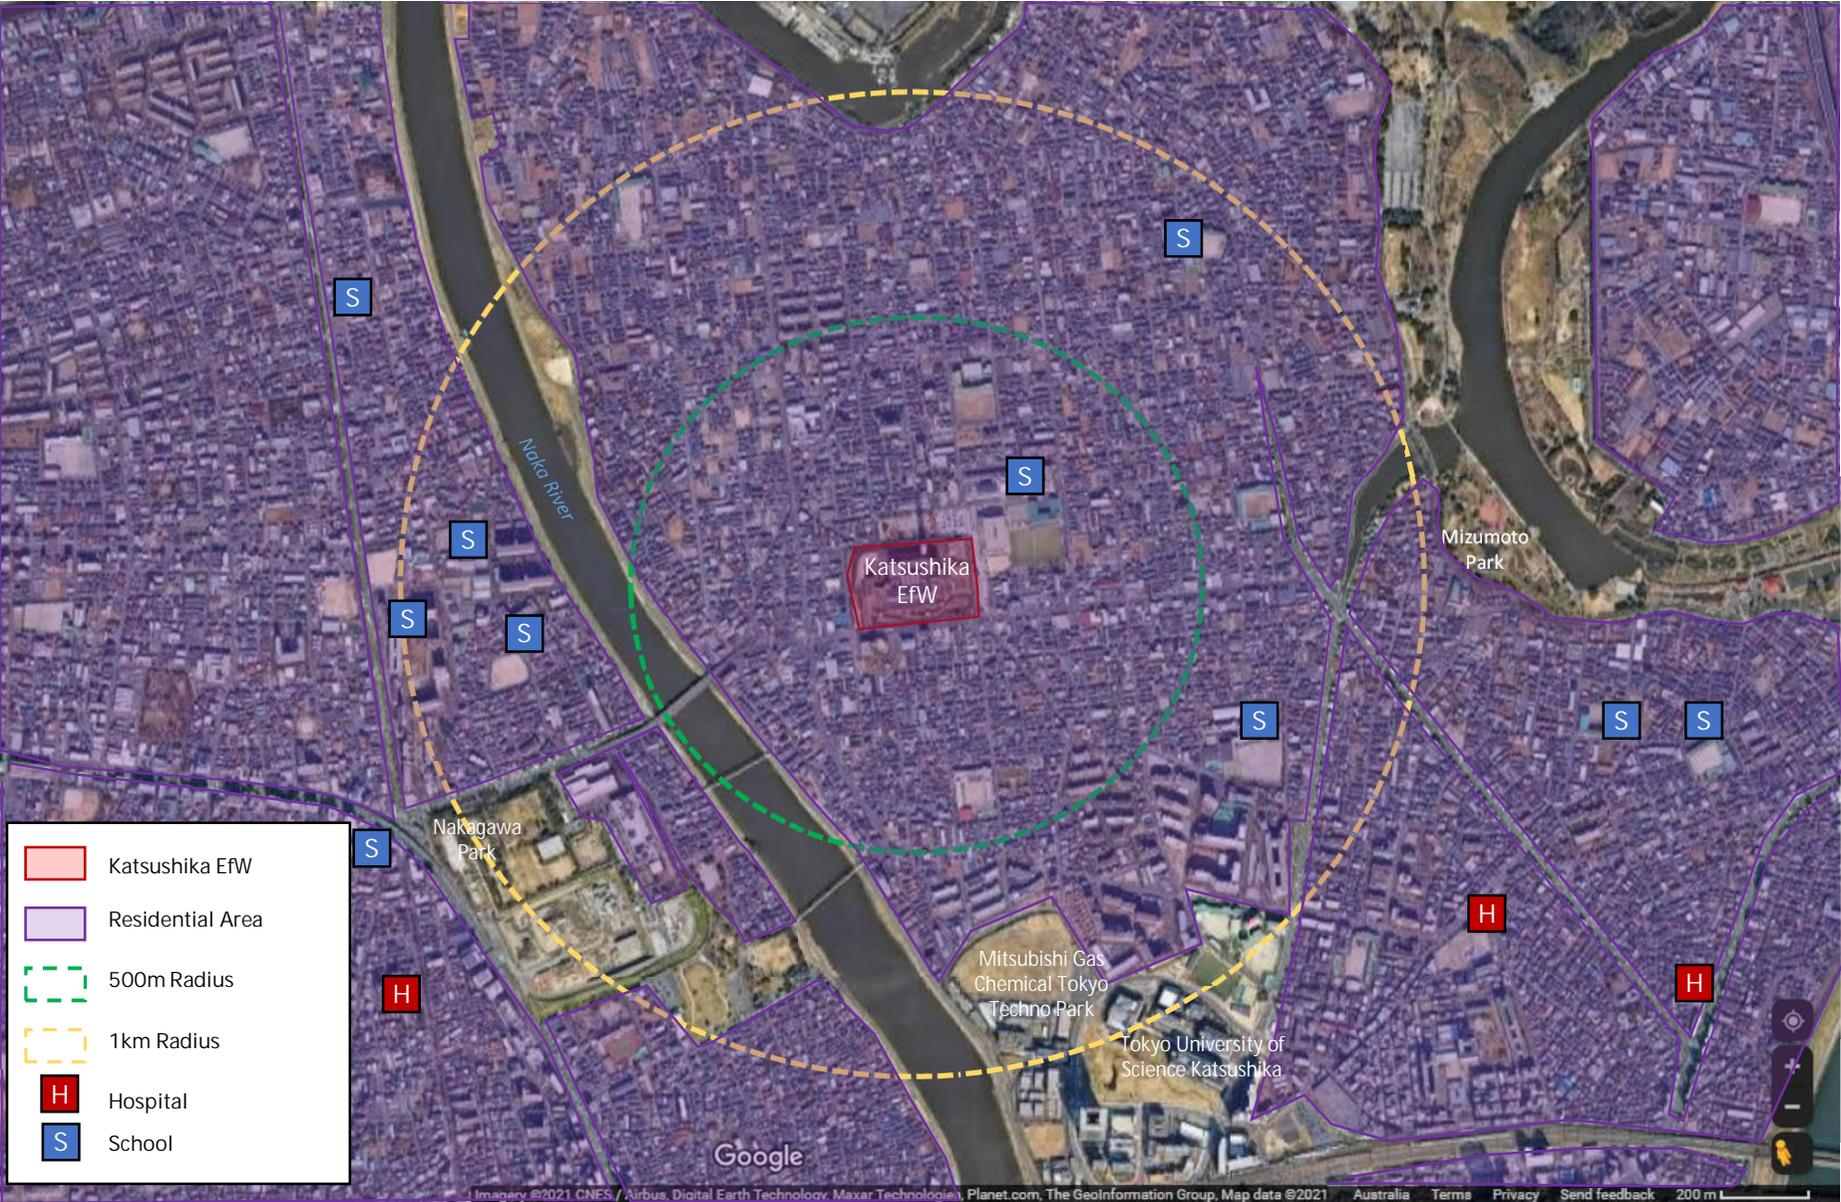

Issy Urbaser Energie

Paris, France

Katsushika EfW

Tokyo, Japan

Spittelau WtE Plant

Vienna, Austria
