

## **High Risk Personal Meeting Course Details**

Security and confidentiality are difficult to maintain in today's overly connected world. Safely and discreetly conducting sensitive business in an elevated risk environment requires specialized knowledge and skills. The High Risk Personal Meeting course (HRPM) gives you that knowledge, and provides you with those skills. HRPM integrates both the digital and physical security domains to offer a better way to interact with unvetted business contacts, confidential informants, potential trial witnesses, or participate in any business operation taking place in a high-threat or non-permissive environment. During a High Risk Personal Meeting the threat, physical or digital, can be from your meeting contact or interested third-parties. The HRPM course uses both lecture and practical exercise periods to explore and refine techniques for pre-event planning and preparation, countering technical and physical surveillance, threat recognition and avoidance, as well as handling confrontational situations and third-party interference.

Course topics include:

- Event planning and preparation
- Digital signature management and countermeasures
- Operational communications
- Surveillance detection techniques
- Counter-surveillance planning and execution
- Handling unknown contacts
- Meeting mechanics and control techniques
- Contingency planning and execution

Course length: 5 days (50+ hours)
