AUTOMATION & TECHNOLOGY SOLUTIONS

INDUSTRY 5.0

INDUSTRY 5.0

Sustainability, understood as efforts to reduce the carbon footprint, promote circularity and the incorporation of production systems based on renewable energies.

Empowerment of the individual, to treat human and fundamental rights as a priority, for example with the General Data Protection Regulation, and for workers to benefit from the digital transition and the advantages of technology.

Resilience, seen as the ability to adapt to difficult economic and community situations, and to take action for a recovery based on green, digital and social priorities.

SERVICES WE OFFER

- Intelligent Automation
- Internet of Things (IoT)
- Data Analytics and Big Data
- Mass Customization
- Sustainability
- Human-Robot Collaboration
- Augmented and Virtual Reality
- Cybersecurity
- Predictive Maintenance

These services seek to improve the competitiveness, adaptability and sustainability of companies in an increasingly complex and dynamic production environment.

INTELLIGENT AUTOMATION

Implementation of robots and automation systems that work alongside humans to improve efficiency and accuracy in production

INTERNET OF THINGS IOT

For Auttecs, the Internet of Things (IoT) offers the opportunity to automate processes, enhance system integration, and provide real-time monitoring and control of devices. This can be applied across multiple sectors, including manufacturing, logistics, energy management, smart sectors, and more. The integration of IoT allows Auttecs to deliver intelligent solutions that respond to dynamic conditions and improve system performance through data-driven insights.

DATA ANALYSIS AND BIG DATA

- Use of analytics tools to interpret large volumes of data, optimize processes, and make informed decisions

MASS CUSTOMIZATION

- Ability to mass-produce customized goods, adapting to specific customer needs

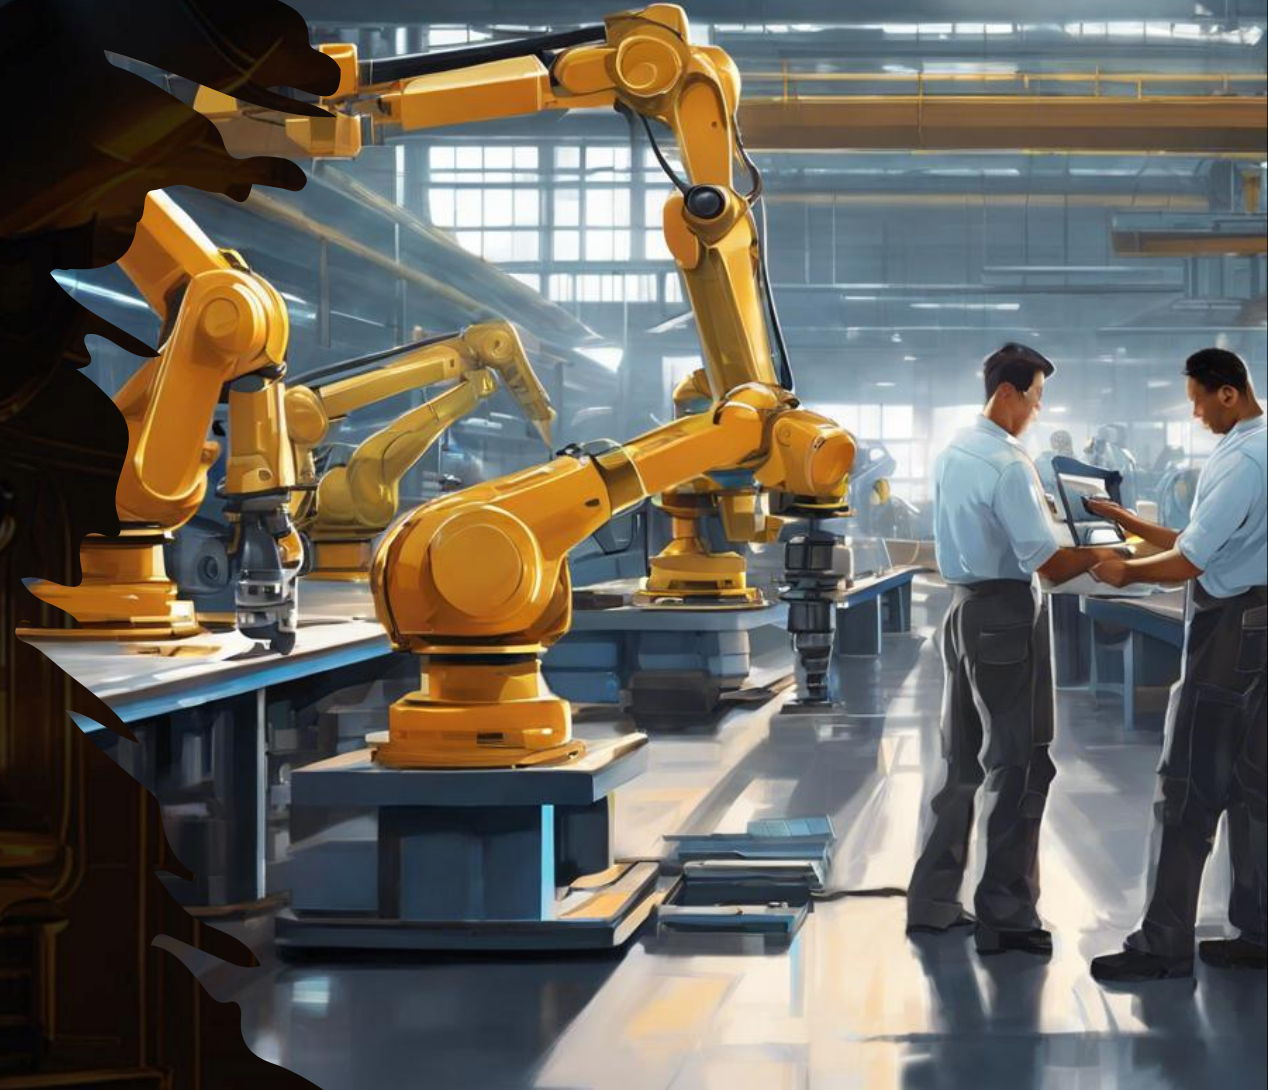

SUSTAINABILITY

- Implementation of practices that reduce environmental impact, such as circular economy, efficient use of resources and waste management

HUMAN-MACHINE COLLABORATION

- Development of work environments where humans and robots collaborate, improving ergonomics and safety at work

AUGMENTED AND VIRTUAL REALITY

- Use of immersive technologies for equipment training, design, and maintenance, improving user experience and staff training

CYBERSECURITY

- Protecting critical systems and data from cyber threats, ensuring information integrity

PREDICTIVE MAINTENANCE

- Implementation of technologies that allow equipment failures to be anticipated, reducing downtime and maintenance costs
