

SEWING MACHINE COVER

Pattern is 29"L x 18"W of quilted fabric (unless you have measured your machine).

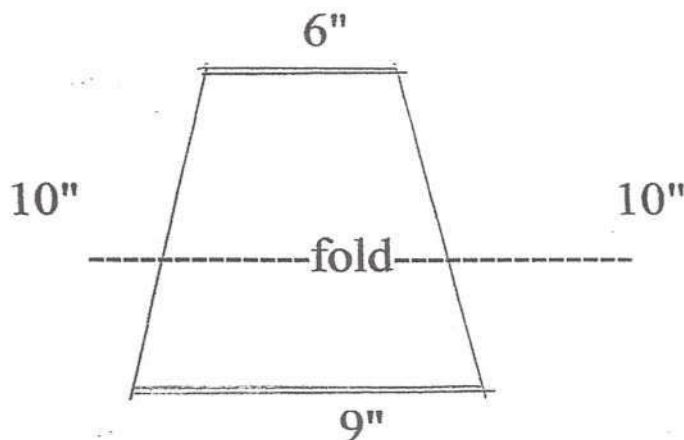

Side pattern is 6" on top going to 9" at the bottom and 12" on each side. If your measurements are different for your machine here is the math:

Measure your machine from front to back subtract 5" divide the remaining number by 2.

Example; 25" front to back

$$\begin{array}{r} 25" \\ -5" \\ \hline 20" \div 2 = 10" \end{array}$$

You will use the 10" measurement on the side template- do not cut the extra off just fold it back.

With right sides together and side panel on top stitch 1/4" seam. When you get to a corner clip at the corners of the 29"x 18" fabric this allows you to turn the corner.

Sew binding on bottom of cover to finish.

With right sides together and side panel on top stitch $\frac{1}{4}$ " seam.
When you get to a corner clip at the corners of the 29" x 18" fabric this allows you to turn the corner.

Sew binding on bottom of cover to finish.
