**FEATURING** • Vision development • Visual processing deficits • Visual sensory challenges • Ocular motor screenings • Strategies for seating and positioning • Environmental modifications to optimize visual processing • Practical strategies and carryover ideas • Fun activities that optimize vision, visual processing skills and build skills

## COURSE DESCRIPTION

Vision and visual processing are essential to the development of the children we work with. This requires professionals to optimize vision (what the eyes see) and visual processing skills (how we use what we see). This 3-hour workshop will examine vision and visual processing, covering basic techniques for identifying visual processing problems in children, providing practical strategies for optimizing visual processing, and presenting fun therapeutic activities that build essential skills.
