

INSTALLATION GUIDELINES FOR CUT PILE MODULAR CARPET TILE

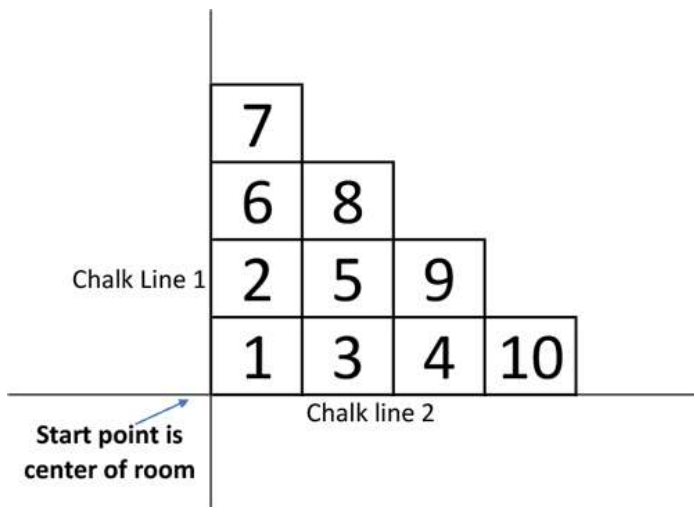

Tools needed: tape measure • chalk line • large straightedge • carpet knife

These installation guidelines are intended to assist the installer. Any variance from these guidelines will become the responsibility of the person who is doing the installation and not the manufacturer.

WARNING: Never sand or scrape asbestos tile. Removal of any products containing asbestos must be done by licensed trained professionals.

LAYOUT FOR YOUR CARPET TILE

Start the installation as near the center of the room as possible by snapping a chalk line from one wall to the opposite wall. Do this in width and length.

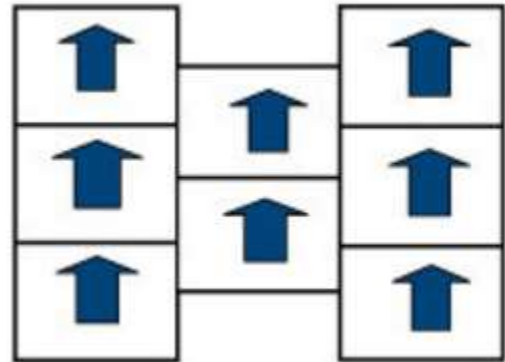

INSTALLING YOUR TILE

Each tile has directional arrows on the back. Cut pile carpet has a “directional” look, so it is important that the arrows all go in the same direction to avoid seams that look different.

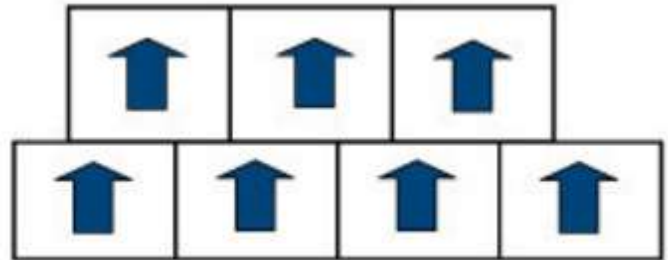

It is a good idea to lay out 8 or 10 tiles the way you want them to make sure you have the flooring design you prefer before adhering them to the floor.

Here are some recommended installation layouts.

ASHLAR

BRICK ASHLAR

MONOLITHIC

(Continued on other side.)

Once you have chosen your tile placement, it is time to move to the actual peel-and-stick installation.

Begin installation at the intersection of the two chalk lines. Proceed to the adjoining quadrant until all 4 quadrants have been completed.

CARTONS NEEDED FOR 23.5 X 23.5 CARPET TILES (allows for approximately 10% waste)

9 tiles per carton • 3.84 ft² per tile • 34.52 ft² per carton
