The 6th Annual Information Assurance Forum –
Presentation Summaries

Surviving in the Software Licensing Jungle
Todd Wilson, Manager of Research, Cooper Tire & Rubber, Inc.

Review real-world licensing cases and learn from past mistakes. Prepare for the future, including the unlikely and the unknown software audit. How to take advantage of software tracking tools and internal software audits. Free Software and Shareware licensing: what are you really licensing? How is Free Software different from proprietary software? Can businesses use Free Software?

Plagiarism and Fair Use
Doug Huffman, Attorney at Law, Firmin, Sprague & Huffman Co., L.P.A.

In the age of "cut and paste" when can I use someone else's materials without infringing a copyright?

The Cost of Misappropriation
John M. Pontius, Senior Analyst, Interhack Corporation
C. Matthew Curtin, CISSP, Founder, Interhack Corporation

After a year of operation, the founders of a new and small company found themselves defending a lawsuit from their former employer alleging trade secret misappropriation. When the founders left their former company, they had some of the company's information on their laptop computers. Attorneys were hired to defend the new company against the suit and forensic computer analysts were retained by both sides to address the issue. In this presentation, we will consider the impact of copying information on the small company and how the problem could have been avoided.

Consultant Residue
C. Matthew Curtin, CISSP, Founder, Interhack Corporation

When the State of Ohio lost a system backup, a significant effort was undertaken to identify and to review the data for personal information and to alert affected parties. The system backup was part of a state-wide ERP system being implemented by the consulting firm Accenture. As often happens with consultants, information was brought in to the project to reuse software that would be helpful for implementing the system and keeping costs down. Ohio's data assessment determined that some of the data brought in by consultants appeared to be sensitive information belonging to people and entities outside of Ohio. We will discuss how data can be moved inadvertently, the impact, and how data owners and consultants both can avoid the problem.
