

How to Use Michigan Made Mix™

1. Pick the correct size container
2. Fill container with M3
3. Place your plant in the soil
4. pH your water to 6.5
This has been found to give the best nutrient uptake.
5. Water, but be careful NOT to OVER WATER your plants. M3 is very absorbent.
6. Continue steps 4 & 5 until you harvest!

M3 will feed your plants naturally and consistently with every Macronutrient and Micronutrient in time released form that your plants need to flourish from start to finish.

Just add water!

Michigan Made Mix™

This patented mix has been designed and tested by experts to include all of the nutrients that you will need from start to finish. All you need to do is add water, and M3 will give your plant all the correct nutrients at the perfect times throughout the FULL growing cycle! This includes both the **vegetative** AND **flowering** stage! Some other mixes claim to last the full growing cycle and fall short after the vegetative stage.

M3 is a professional growing media that has been designed to allow proper drainage and moisture retention to allow you to do less, and get more out of your plants.

M3 does **NOT** cause failed tests for heavy metals! This is a big deal!

THE MAGIC IN THE MIX

M3 has PaPa's Perfect Poop™, which is an organic OMRI listed slow release fertilizer already mixed in the soil to give your plants the proper nutrition, without giving you the metallic taste left by traditional fertilizers. This takes out the stress of using different fertilizers for different stages of growing. PaPa's Perfect Poop™ does all of that for you! All you do is water!

PaPa's Perfect Poop™ makes this amazing mix that much better!

INGREDIENTS IN M³

- Professional Canadian Sphagnum Peat Moss
- Michigan Reed-Sedge Peat
- Horticultural Grade Coarse Perlite
- Horticultural Grade Coarse Vermiculite
- Dolomitic Lime
 - To adjust pH
- PaPa's Perfect Poop™
