## One Step at a Time

Issue 21 July 10, 2021

seen, they like it a lot!

Good afternoon everyone!

We've been continuing our work in both the plant beds and the plot, shoring up our tomatoes for the ever increasing weight. As you can see, they've become substantial in height so we've employed this grid tying to distribute the weight evenly between the poles. Notice how the undergrowth has plenty of room to breathe around the hay below. We certainly don't want any mildew and there needs to be room and/or balanced sunlight around the zucchini and blue lakes. Judging by the flowers we've

Our buckwheat we planted has taken very well to the soil. Having these around the edges not only feeds the soil nutrients but it will develop a root system capable of protecting from erosion. We've done the same around the edges to our newest raised bed which will hold our squash (and greens?). The mound of dirt and wood have been staggered to the side in a mini swale fashion to trap rainwater overflow in the trench. We took care to ensure that it would be well contained in a manner following the natural flow. This will protect it from drowning out plants further down the plot since we are on a bit of a slope here.

We still have lots to do as we look for funding assistance. While bureaucracy delays, not a day goes by that we don't adjust, plant or dig something. Our beans will be the next thing going into the dirt and then onward to the greens we'll go. We won't stop moving because no plant can wait and it's just not the nature of farming. But watching the flourishing plants excites us and continues to give us hope. The reward of being a part of their life cycle is well worth it; it's one of the things we're more than happy to share with you. We'll take you every step of the way.

Thank you and stay tuned for the next update!
