

How to Properly Rig a Commercial Style Crab Pot

- A** Proper type and length of rope. It is illegal to use floating rope.
- B** Commercial float (not homemade) in a highly visible color with license number clearly marked.
- C** State-required biodegradable escape panel (or equivalent; see regulations for details).
- D** Rebar to weigh down the pots (bricks placed inside the pot will also work).
- E** Excluder device - required in all funnel entrances when the pot is set in any body of water less than 150' wide at mean low water and any man made lagoon.

Homemade floats often fail!
