

Quercetin

Introduced 1992

What Is It?

Quercetin belongs to a class of water-soluble plant pigments called bioflavonoids that cannot be produced in the human body. It is also considered a phytoestrogen.¹

Uses For Quercetin

Immune Support: Quercetin supports healthy mast cell function.

An *in vitro* study performed on neutrophils reported that quercetin mediated beta-glucuronidase and lysozyme release, and significantly moderated arachidonic acid release from cell membranes.¹

Antioxidant Support: Quercetin promotes cardiovascular health by protecting lipids from oxidation and supporting the health of capillaries by enhancing their strength and integrity. Studies suggest that quercetin may also promote healthy vision by mediating sorbitol production.¹

Cellular Support: An animal study indicated that quercetin supported prostate cell health by moderating receptor function at the transcription level. Additionally, *in vitro* studies have reported that this powerful flavonoid may be supportive of colon and breast cell health.¹

What Is The Source?

Pure Encapsulations Quercetin is derived from Fava d'anta tree (*Dimorphandra mollis*) pods.
