

9MM 115GR FMJ

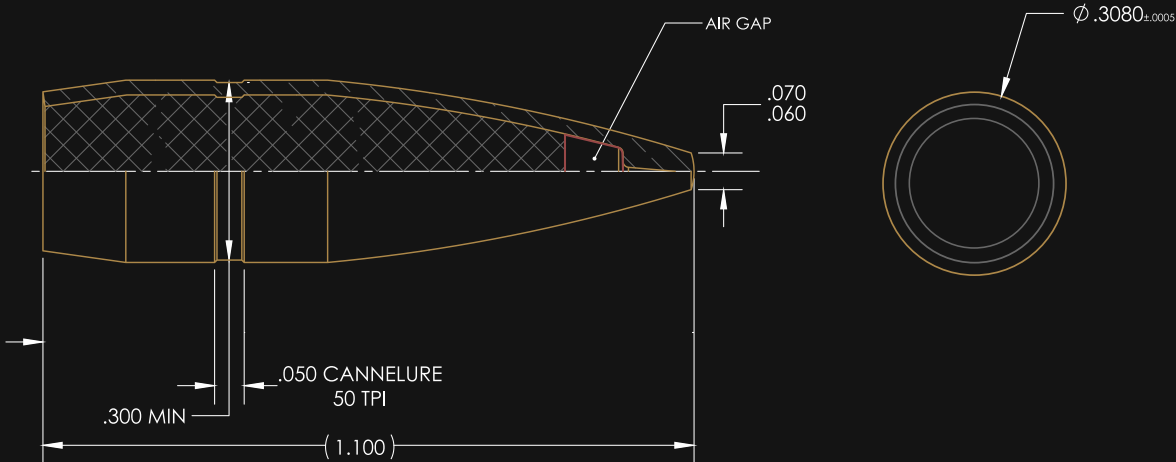

9MM 124GR FMJ

5.56 55GR FMJ

308 147GR FMJ

Projectile is made from a core of lead with a copper jacket, providing a balance of weight and durability.

Full Metal Jacket (FMJ) - The copper jacket on this bullet type offers consistent feeding and reduces deformation on impact.

Fully Filled Lead Core: Our Full Metal Jacket projectiles are designed with a fully filled lead core. This eliminates any space or "step" between the lead core and the copper jacket, providing a smoother and more consistent loading experience. This feature reduces the risk of bullet setback and tipping during loading, which can improve both safety and accuracy.
