

Red Flags in Kinesiology

Staying within the boundaries of safe clinical practice
An International Online Workshop from ICPKP

This workshop is about becoming a practised health professional who is a true member of an Integrated Health Team and not just 'an alternative therapist'.

No other kinesiology system provides a unit on 'Red Flags' but Dr Dewe says that, *"PKP practitioners must be aware of signs and symptoms that are beyond their scope of practice and they need to know enough about the process of medical diagnosis, even though they don't treat diagnoses, to be able to refer clients appropriately before a medical emergency occurs"*.

You will learn:

- 7 reasons why diagnosis is important; understanding the process;
- Standard systemic review questions to sort clients problems quickly & efficiently;
- Understanding when a client's problem is within the scope of PKP & when it is not;
- Standard questions to protect the client;
- Recognising mental health disorders; when a problem needs combined care;
- Clinical algorithms – how to use the flow charts for acute & chronic conditions, if and when to refer.

What Graduates have said:

"Red Flags is a truly inspirational workshop and is a must for any Kinesiologist!"

"The session was informative, clear and lots of FUN!!"

"This course is really the key to raising the level professionalism of our industry."

"My father is a hospital cardiologist. When he saw my class notes for 'Red Flags in Kinesiology' he told me that at last he was able to say he was happy that I was studying PKP and was no longer worried about my career choice".
