Simpler is Better

'AddonSoftware by Barista' Made Simpler

AddonSoftware® Cloud Services is a new and simpler way of deploying and upgrading your enterprise resource planning (ERP) software. Now you can choose to run BASIS solutions on premises just like you are used to or online through an external host in a cloud environment - one software solution for both software environment options. AddonSoftware Cloud Services gives you another choice in providing the best IT strategy for your customer's business. It makes AddonSoftware more affordable to use, own, and deploy, and it delivers a faster time-to-benefit.

By offering our full-function ERP solution on Amazon's world-class EC2 infrastructure, you have access to a stable and secure platform to meet your customers' business needs more efficiently. AddonSoftware Cloud Services - ERP simpler than ever before.

Significant Cost Savings – Our simple user-based subscription model provides a strong selling statement for upgrades or new sales. There are no large upfront costs and no hardware to purchase, install, or maintain. There is no need for complex hardware and software backup systems and their associated annual maintenance contracts. Everything you need is included in the monthly fee.

Performance and Reliability – The performance, reliability, and security are as good, if not better, than that of a typical on-premise installation.

Our Experience, Your Benefit – Our experience with Amazon Web Services frees you up to focus on your application development while isolating you from common hardware failure scenarios. We handle the creation of instance types, machine configuration, assigning operating systems, and the installation of AddonSoftware. You have unlimited access to the system to load your databases, manage, configure, and install your customized AddonSoftware.

Configuration and Customization Freedom – There are no restrictions to continuing your customization and solution development in the cloud.

Advantages of the Cloud –
- No costly hardware or complex version controls necessary
- No large capital outlay
- Quicker installations
- No under- or over-used servers
- Seamless rollout of new features and functions (optional)
- 99.95% up time
- Elastic load balancing allows your application to automatically scale up or down based upon need
