

Gilberti KT Hypothesis

A New Water-Origin Theory for Planet Earth

Suggesting the Outer Mantle's Lava Steams into the Planet's Crust Generating Endless Pure Contaminant Free Alkaline Spring Water with access through historical Meteor impacts Tilting Earth's Platforms, Buried Volcanoes, and Fault Lines that can be Piped to the Tap for Water Supply, Health Care, and Economic Sustainability

ABSTRACT

There are a few different theories when it comes to Earth's Water origins such as Ice Comet theory [1, 2], Oceans beneath the Earth Theory [3], etc. Humans can only drill approximately 8 miles into the Earth Crust, [4]. Some unresolved observations when it comes to water origins are how the water is really being generated inside of the Earth and where the water is really coming from. In the Ice Comet Theory, they suggest that the comets that came approximately 4.6 billion years ago that struck the planet and formed Earth's water. Many Scientists use Deuterium to Hydrogen ratios for tracing water origins; this causes the ice comet theory to have a somewhat doubt due to the fact that different ice comets have had a different hydrogen isotope compared to Earth's water isotope [5, 6]. The oceans beneath the Earth theory brings the idea of Massive freshwater oceans being deep inside of the Earth's mantle holding 3 times the amount of water than what is on Earth's surface in a mineral called ringwoodite. One of the biggest factors of why this theory has doubt is because samples and evidence for this theory are not directly sampled from the mantle due to the incapability of being able to drill that deep.

We are proposing a theory that suggests a mix of these theories mentioned above involving the Yucatan meteor and other historical impacts that hit the Earth created a tilted platform and gives us access to this primary water that could be deep inside of the Earth through cracks with some unique discoveries that were made by Joseph Gilberti PE, his family, and other global consultants. A unique water mixture has been found under the Cecil Daughtrey ranch in Sarasota, Florida in 2013, showing the highest calcium and magnesium in an alkaline reading of pure contaminated free spring water. This unique reading is being generated from the KT Event and/or the Yucatan Meteor Impact that hit the Earth 65-100 million years ago, that created a tilted Florida platform yielding endless antioxidant spring water. This resource also has massive amounts of flow and transmittivity, according to multiple consultants who have run tests, including but not limited to, Jim Murray, who is an oil and well driller from AMPS Aquifer Maintenance and Performance Systems in Palm Beach County, Florida. With this discovery that has been found, this can change the way we look at Earth's water origin theory showing that perhaps the water could really be trapped in the planet's crust around 5-20 miles deep. The Gilberti KT Hypothesis Theory suggests historical meteor impacts create access to deep underground ancient spring water oceans, being generated by the lava steaming into the crust at the outer mantle. The access points for this water also are found through buried volcanoes, and fault lines as there is another discovery in New Jersey near Watchung Mountain, a buried volcano that also yields a tremendous amount of Primary Water right next to New York City. The New Jersey source is 25 miles to the West in Somerset County approximately 500 feet above New York, where this Endless Primary Water Resource also shows no contaminants.

After looking at the Gilberti KT Hypothesis and how to find more, new discoveries should be the goal to find these critical primary water access points in highly populated areas such as the sources found for New York City, a buried volcano, and the tilted platform from the Yucatan Meteor found in the sunshine state for housing and tourism. Other planets and space exploration will now have a different view and an increased understanding of potential life in other universes or nearby planets. If a planet or moon has a core with lava patterns or indicators, then life may have existed or potential water may also be trapped inside allowing for colonization. People must understand the Earth or tell the truth about Earth's water generation and spend our efforts here first with these primary water resources instead of launching rockets with NASA and Space X that is currently wasting taxpayer dollars while hiding these primary water resources from America and other Nations for the past 13 years. Once this thermodynamic model is understood, based on these unique water readings that have never been seen on Earth before, the geological and empirical indicators that has been discovered and implemented with civil engineering expertise and world renown underground consultants can now be disclosed to the public instead of hidden from the people. This global water supply knowledge could potentially eliminate all wars and hunger in days across Earth and be able to lower cancer and disease risks for humanity. It can also help generate food, water, and new medicines in remote regions and desert areas.

1. Introduction

LandTech Design Group Inc is owned by Joseph Gilberti PE, a Florida professional civil engineering firm with over 30 years of experience in infrastructure and land development, who graduated from the University of Florida. Luciano and Roman are Joe Gilberti's two sons where Luciano is a civil engineer in training who graduated with a civil and environmental bachelor's degree from Florida Gulf Coast University and Roman Gilberti who is currently attending FGCU for civil engineering as well. LandTech Design Group Inc was retained to produce a Mining Permit in Sarasota Florida at the Cecil Daughtrey 2380-acre Ranch located at 9438 Daughtrey Road, Sarasota Florida 34266.

On April 3, 2013, during LandTech Design Group's initial survey of a very old deep Floridan well, approximately 1500 feet deep at the northeast corner of the property, North of State Road 72 (Clark Road) that yields unique alkaline pure antioxidant spring water (Primary Water) with no contaminants and a negative voltage that benefits health, medicine, regional water supply, and is ready to drink right out of the ground. Once this discovery was made, it was time to enhance the evaluation showing that the well was tied to an underground isolated resource yielding tremendous flow in the Lower Floridan from a tilted Florida platform created by the Yucatan Meteor impact, also known as the KT event. LandTech Design Group Inc came up with the Gilberti KT Hypothesis and implemented a 300-mile transmission pipeline down I-75 from Sarasota to Miami Florida to solve all future drinking water shortage issues by providing an extreme higher level of service in water supply for health, environmental, and economical sustainability. This underground knowledge to access endless alkaline contaminant free spring water has allowed LandTech to reverse engineer the geological data regarding accessing massive deep underground oceans beneath the Earth to find more locations across the United States and other nations. Since this hypothesis was written, a massive attack on Engineer Joe Gilberti's civil rights, clients land, family and America has taken place showing more indicators of the global value and change this resource and hypothesis brings humanity in a major positive way. This information demonstrates more fresh water deep below Earth's surface showing a new water origin theory that can take mankind away from the current scarcity model that creates hunger, diseases, and wars which seem to be rising at an exponential rate.

2. Implementation & Global Human Life Sustainability

2.1. Closer to the Heart Engineering Permit Plans

Joseph Gilberti PE created Closer to the Heart Engineering Spring water infrastructure transmission plans to bring endless antioxidant spring water with zero contaminants and no water restrictions to the tap connecting into the Peace River Manasota Regional Water Supply Authority pump station that provides all of Sarasota, Manatee, Charlotte, and DeSoto counties their tap water. Appendix A shows a picture of this unique Primary Water resource along with its water quality report showing zero contaminants. These are just the phase 1 plans which is to interconnect into Peace River Manasota Regional Water Supply Authority in their loop option to provide this unique world resource to the tap for the areas mentioned above. The unnecessary RV Griffin Reservoir will be converted to a power plant providing more sustainability for the region. The phase 1 alignment plan for Peace River map can be seen in Appendix B with FDEP Permit letter from Nolin Moon that only needs one signature. The phase 1 construction documents can be found on our website at www.gilbertibluegold.com.

2.2. Pipeline for State-wide Infrastructure Plan

Once Phase 1 is complete, a 300-mile pipeline from Tampa to Miami will then begin construction going down I-75, or alternatively, proposed down the old, abandoned CSX Seminole Gulf Railway to prevent dealing with traffic to provide the unique world resource to the rest of the state for all Florida residents to prevent dealing with I-75 maintenance of traffic. Utilizing old railway alignments for these new primary water pipeline transmissions and mitigating new tracks on widened roadways will help increase production and delivery to get primary water to the tap for existing high populated areas. See Appendix B for the overall Florida state-wide alignment plan for the proposed Gilbertibluegold spring water transmission system. Overall, this project will be able to lower all water and power bills, providing no water shortages, and reducing cancer rates drastically as current tap water treatment from groundwater & rivers is based on cancer rates. See EPA health advisories for drinking water. The Longevity, efficiency and sustainability of infrastructure for people, power plants, and pipelines is increased with these endless primary water resources with no contaminants.

3. Discovery Methods and Reconnaissance

3.1. Geological and geophysical evidence

The Down the hole video performed on April 3, 2013, by Jim Murray from AMPS Aquifer Maintenance and Performance Systems in Palm Beach County, showed large cracks for tremendous fresh spring water flow and vertical scratches regarding a tilted Florida platform from the KT Event. The down the hole video shows that, according to Jim Murray, "Over the past 13 years I have supervised and used down the hole video units and water quality logging trucks in a variety of areas including Closer to the Heart. Based on the results obtained during our pull back zone testing, water quality is extremely good for both the area and the depth, the pH values during zone testing ranged from 7.8 to 11." See Appendix B that shows acknowledgement of this resource by Jim Murray from Amps Aquifer Maintenance and Performance Systems.

3.2. Water Quality Analysis

The raw water generating from the discovered Floridan well yields unique spring water for human health and has readings including the highest concentration of calcium and magnesium ever seen in an alkaline antioxidant spring water mixture, coming straight out of the ground, showing zero contaminants and a negative voltage that was done by Environmental Testing and Research Laboratories (ETR) on October 24, 2012. The sample was taken at the top of the pipe and was exposed to the air that was mixed with 3 aquifer zones, where the deep unique water is coming from the Lower Floridan. This unique water shown in the test from the top of pipe is a mixture of what is really coming from deep below showing a secret underground ocean where those water quality readings are confidential for National Defense purposes and will be disclosed once at least 10 Universities and at least 2 living Presidents from both parties (Democrat and Republican) man up and begin to help with this world resource for the people of the United States. There is no PFAS (Known as the "Forever Chemical") in this water mixture preventing harmful man-made toxins from staying in you for most of your life that never leave your body [7].

4. Findings and Discoveries of Hidden Alkaline Endless Natural Resource

4.1. Estimated deep-water inventory

The water reading results show a massive underground river of fresh water coming from the lower Floridan. As the down the hole camera gets deeper, it also shows how the water is getting much cleaner. A picture from the down the hole video can be seen in figure 1 showing significant giant cracks of fresh water. Oil and aquifer consultants have confirmed that the results from this down the hole video, these primary water resources could be coming from deep freshwater oceans bigger than the North American continent. These underground freshwater oceans can help us with future drinking water shortages and can provide big infrastructure projects to help create a much higher level of service for the world. If there is plenty of water for everyone one in the world and our theories are correct about these geological indicators with meteor impacts, buried volcanoes, and fault lines, then the wars and hunger can now be solved with these primary water resources. Desert Nations and regions can contain these resources, sometimes much deeper, that can allow opportunity for agricultural production to lower hauling/trading costs. The cracks in figure 1 show the amount of water that can be pulled for the sunshine state, showing massive transmittivity and flow. This will help give us a higher level of service for providing no water shortages for both drinking water and irrigation.

Fig. 1. Down the hole video screenshot at 1500 ft depth showing massive cracks of fresh water coming from the Lower Floridan with no Salt Intrusion showing potential Fresh Drinking Water Ocean

4.2. Unique Significance of Water Mixture

A table comparison of premium alkaline bottled spring water compared to Gilberti Blue Gold raw water generated from the discovery illustrates concentrations of calcium and magnesium along with tested pH shows a much higher drinking water quality reading than premium bottled water brands such as Fiji, Mountain Valley, Voss, Evian, Icelandic Glacial, and Acqua Panna. All water quality results were found on their latest water quality report date found from each Premium Water Bottle Brand Website. See table 1 below showing the GilbertiBlueGold Raw resource being much higher quality than other premium water bottle brands that have

been sold to the public and filtered and treated to remove contaminants. This comparison provided is full proof we can provide higher quality spring water to the tap of over 20 million people than any bottled water sold at the shelf with much lower water bills and health risks.

Table 1. Water Quality Comparison of GilbertiBlueGold with Premium Water Bottle Brands Showing a Major Significance of Better Water Quality Even Before Filtration and Treatment [8-20]

Quality	GilbertiBlueGold	Fiji Water	Mountain Valley Spring Water	Icelandic Glacial	Acqua Panna	Evian	Voss
Calcium (mg/L)	118.2	18.	70.	5.5	34.	81.	6.5
Magnesium (mg/L)	71.9	14.	7.2	2.2	6.9	26.	1.
pH	7.49	7.91	7.8	8.49	7.7	7.95	7.1
Contaminants (yes or no)	NO	YES	YES	YES	YES	YES	YES
Image							

5. Discussion

5.1. Gilberti KT Hypothesis

Evidence of this World Primary Water Alkaline Resource helps prove the Gilberti KT Hypothesis Theory showing geological indicators of access points through meteor impacts like the KT Event, Buried Volcanoes, and Fault Lines. The inside layer of the Earth's Crust could potentially be the real location for where Primary water is really being generated from. The lava steam rising hits these rocks and causes the water to form inside of the crust where people can drill and be able to access these resources. Different Meteor impacts that created craters could possibly have created more tilted platforms and different minerals at a variety of depths accessing different endless spring water oceans, just like the Yucatan Meteor creating Florida's tilted platform. See figure 2 showing meteor impact locations and the creation of Florida's tilted platform. These Primary Water resources could be rubbing off pieces of meteors that could show us knowledge of new medicine and evolutionary discoveries. If this theory is correct, then we can begin to search for these geological indicators across the world where many countries will be able to have their own primary water resources. For the last 75 years oil drilling across the Earth and their corresponding oil logs can give us the locations of these secret underground oceans.

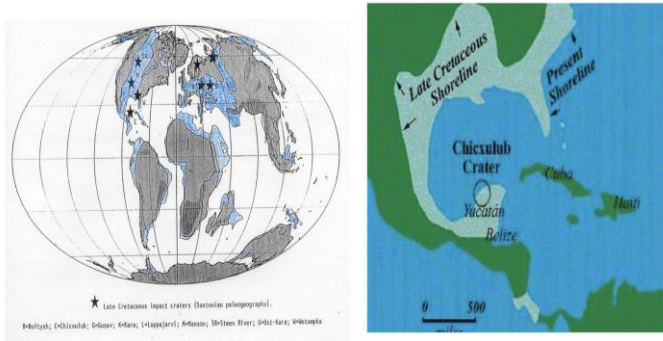

Fig. 2. Both maps here show craters formed from significant meteor impacts where these indicators could be new spots for more Primary Water Resources like the Florida location. See Right map showing the Yucatan Meteor impact creating Florida's tilted platform giving access to this Unique Primary Water Resource found by Joe Gilberti PE

5.2. Economic Benefits

Many economic benefits can come with these Primary Water resources. Alkaline housing booms with reestablishment of real estate values with alkaline, cancer preventing blue gold homes. More jobs will be created with new home and development construction with replumbing and water mains by creating more blue gold alkaline homes, hospitals, businesses, schools and statewide infrastructure projects. More science jobs will be created with this new medicine mixture with super high calcium and magnesium concentrations. Reduced energy and water costs as there is no more need for treatment, and current reservoirs can now be turned into power plants providing sustainability and efficiency for the region. Future capital costs will be reduced as these primary water resources will provide endless amounts of water even for future populations. New foods and new agriculture in drier and desert areas can be utilized by accessing these secret access points hidden deep below; where we can cut costs on trucking and deliveries of these foods as these areas will be able to have their own agriculture cutting down on fuel and world trade shipping costs. These primary water resources have frequencies that affect a multitude of things such as human health, computer/metallurgy developments, agricultural developments, national defense, communications, and wellness to communities allowing humanity to move forward at a higher frequency for mankind.

5.3. Health Benefits

No one has ever seen a water mixture with readings like this before. The magnesium sulfate in this water mixture can help prevent eclampsia, maternal mortality, and seizures [21]. High calcium is known for improving bone density [22]. Both calcium and magnesium improve digestive health while reducing gastric, esophageal, ovarian cancers, and heart disease [23-26]. The pH is a 7.49 which is considered the "perfect spot" for drinking water [27]. There is no PFAS in this water source as well as no contaminants with an endless capacity. The need for chlorine on disinfection can be replaced with ultraviolet disinfection. This will eliminate the viruses that travel through pathogens of treated water that are using high doses of chemicals and chlorine by replacing those polluted sources with these contaminant free endless primary water resources [28]. Water affects medicine and cell production. Primary water resources with no contaminants will open a new world for mankind to move forward with new science and health care for humanity.

5.4. Environmental Benefits

Some environmental benefits that these primary water resource projects bring involve eliminating sea water intrusion on water supply replacing current polluted tap water with pure alkaline spring water with no contaminants or water shortages. Many funds will now be available for environmental conservation, preservation, and remediation as there is no more need for heavy chemical treatment or reservoir maintenance funds. Port exports of medicine water can pay for US health, social security, and education. These projects can help reduce local withdrawal from constrained upper aquifer and can help end all Florida water wars. Reduces toxic waste disposal in the lower local aquifer. Reduces carbon footprint and helps mitigate climate change and sea level rise. National Defense for water supply is extremely enhanced by utilizing sources past 500-1000 ft in depth. The resources are naturally protected from arial assaults and drone warfare as well as natural disasters and/or pollution from hurricanes, tornadoes, and mining/industrial operations.

6. Conclusion

These primary water resources will be able to provide preventative healthcare, while lowering water and power costs to metropolitan areas. New mixtures from these Endless drinking water resources to the tap of high populated regions will help benefit medicine, technology/computer parts, National Defense, etc. Gilberti KT Hypothesis explains how Yucatan Meteor impact, KT Event tilted the Florida Platforms causing cracks and access points to these deep massive deep underground pure alkaline spring water oceans generated by Lava and Earth's cooling at the Earth's crust. This could potentially eliminate world hunger or any need for wars as these world resources can be found from other historical meteor impacts which will be able to provide power, water and new infrastructure for many areas that never had the opportunity or knowledge of these resources that could be found right under them, even places like the Middle East, Africa, India and the other Desert regions. This theory contests/modifies the environmental protection agencies' "Ice Comet Theory" and "Oceans Beneath the Earth Ringwoodite Theory" with real empirical data and proof for mankind to move humanity away from the scarcity model for Earth's thermodynamic energy and water production generated entirely from the core to the outer mantle, steaming into the crust.

Health Scan Report

Results		Public Drinking Water EPA Limits
<u>Organic Analysis</u>		
Benzene	Not Detected	5.0 ug/L
Bromobenzene	Not Detected	No Limit
Bromochloromethane	Not Detected	No Limit
Bromodichloromethane	Not Detected	No Limit
Bromoform	Not Detected	No Limit
Bromomethane	Not Detected	No Limit
n-Butylbenzene	Not Detected	No Limit
sec-Butylbenzene	Not Detected	No Limit
tert-Butylbenzene	Not Detected	No Limit
Carbon-Tetrachloride	Not Detected	5.0 ug/L
Chlorodibromomethane	Not Detected	No Limit
Chloroethane	Not Detected	No Limit
Chloroform	Not Detected	No Limit
Chloromethane	Not Detected	No Limit
1,2-Chlorotoluene	Not Detected	No Limit
1,4-Chlorotoluene	Not Detected	No Limit
1,2-Dibromo-3-chloropropane	Not Detected	No Limit
Dibromomethane	Not Detected	No Limit
1,2-Dibromomethane	Not Detected	No Limit
1,3-Dichlorobenzene	Not Detected	No Limit
1,2-Dichlorobenzene	Not Detected	600.0 ug/L
1,4-Dichlorobenzene	Not Detected	5.0 ug/L
Dichlorodifluoromethane	Not Detected	No Limit
1,1-Dichloroethane	Not Detected	No Limit
1,2-Dichloroethane	Not Detected	5.0 ug/L
1,1-Dichloroethylene	Not Detected	7.0 ug/L
cis-1,2-Dichloroethene	Not Detected	70.0 ug/L
trans-1,2-dichloroethene	Not Detected	100.0 ug/L
1,2-Dichloropropane	Not Detected	5.0 ug/L
1,3-Dichloropropane	Not Detected	No Limit
2,2-Dichloropropane	Not Detected	No Limit
1,1-Dichloropropene	Not Detected	No Limit
1,3-Dichloropropene	Not Detected	No Limit
trans-1,3-Dichloropropene	Not Detected	No Limit
Ethylbenzene	Not Detected	700.0 ug/L
Fluorotrichloromethane	Not Detected	No Limit

The integrity of the sample and results are dependent on the quality of sampling. The results apply only to the actual sample tested.

Health Scan Report

	Results	Public Drinking Water EPA Limits
Hexachlorobutadiene	Not Detected	No Limit
Isopropylbenzene	Not Detected	No Limit
Methyl-t-Butyl Ether (MTBE)	Not Detected	70.0 ug/L
p-Isopropyltoluene	Not Detected	No Limit
Methylene Chloride	Not Detected	5.0 ug/L
Monochlorobenzene	Not Detected	100.0 ug/L
Naphthalene	Not Detected	No Limit
n-Propylbenzene	Not Detected	No Limit
Styrene	Not Detected	100.0 ug/L
1,1,1,2-Tetrachloroethane	Not Detected	No Limit
1,1,2,2-Tetrachloroethane	Not Detected	No Limit
Tetrachloroethylene	Not Detected	5.0 ug/L
Toluene	Not Detected	1000.0 ug/L
1,2,3-Trichlorobenzene	Not Detected	No Limit
1,2,4-Trichlorobenzene	Not Detected	70.0 ug/L
1,1,1-Trichloroethane	Not Detected	200.0 ug/L
1,1,2-Trichloroethane	Not Detected	5.0 ug/L
Trichloroethylene	Not Detected	5.0 ug/L
1,2,3-Trichloropropane	Not Detected	No Limit
1,2,4-Trimethylbenzene	Not Detected	No Limit
1,3,5-Trimethylbenzene	Not Detected	No Limit
Vinyl Chloride	Not Detected	2.0 ug/L
o-Xylene	Not Detected	T. Xylenes 10K ug/
m+p Xylenes	Not Detected	T. Xylenes 10K ug/

Re: DeSoto County – Potable Water
Facility Name: Closer to the Heart
Facility ID: 6142734
DEP Application No.: 78714-026-DS

Dear Mr. Gilberti:

Thank you for your application for your concern about the processing of your application for the Closer to the Heart Project. We asked for signatures from the utility on the application form, a Public Service Commission Certification and authorization from the owners of the lands the water line will go through. You requested a dryline permit to allow for more time to secure the authorizations. All permits are issued with these authorizations. Dryline permits are issued when critical facilities (such as pump stations and treatment facilities) have not been built.

These are the reasons we need the authorizations:

Your project will provide water to the Peace River Manasota Regional Water Supply Authority. This utility must sign the application to bind itself to ensure proper operation.

We need approval from the owners of the properties where the pipeline will be installed. The Department may not convey any rights, privileges, title of other entities' properties. That permission must come from the property owner.

We need a copy of the Public Service Commission's (PSC) certificate authorizing you to provide the water service. This certificate is required for every public water system in DeSoto County. This certificate grants you the service territory for water. Without the certificate the Department may not issue a permit.

Without these approvals, any permit the Department issues will not meet the minimum requirements for water systems. Our intent is to permit projects that meet the basic requirements. When the project conforms to the rules, we can successfully defend challenges in court.

I also asked by email on June 24 about plans and construction through the wetlands as well as diameters for flushing stations. These questions are not as critical as securing the authorizations. I can authorize up to 90 more days for you to provide the authorizations. Please let me know if you need it.

I hope this letter clarifies the Department's needs for permitting.

Sincerely,

Nolin Moon
Environmental Administrator

To Whom it May Concern:

Re: CLOSER TO THE HEART

Over the past 13 years I have supervised & used downhole video units and water quality logging trucks in a variety of areas including Closer to the Heart. Based on the results obtained during our pull back zone testing, water quality is extremely good for both the area and depth, the pH values during zone testing ranged from 7.8 to 11

If you have any questions about the above information or if we may be of any further assistance please don't hesitate to call. Thank you.

Sincerely,

Jim Murray
