Our STEM program is awesome!

Kids are building our future works.

Reading is Gold!

The best part of learning is mind growth. That's what reading does.

Creativity opens the mind.

Children are born creative, they just need help bringing it out.

We're Open for Learning

It's been a long time coming and the time is finally here. We would like to introduce you to a great learning experience.

The current climate around early childhood education is vast. There are many facilities that offer the services of care for our children but, does the care surpass the need for a safe haven. Early Achievers Academy seeks to not only provide safe haven but, a transformation in early learning.

1

GOALS

We identify learning that will take place over time.

2

PERFORMANCE

We measure performance daily in order to structure goals.

3

PROGRESS

Goals are measured by comparing expected and actual rates of learning.

The importance of early childhood development

Neurological research shows that the early years play a key role in children's brain development.

Babies begin to learn about the world around them from a very early age – including during the prenatal, perinatal (immediately before and after birth) and postnatal period. Children's early experiences – the bonds they form with their parents and their first learning experiences – deeply affect their future physical, cognitive, emotional and social development.

Optimizing the early years of children's lives is the best investment we can make as a society in ensuring their future success.

“Our children now help each other grow”

The emotional, social and physical development of young children has a direct effect on their overall development and on the adult they will become. That is why understanding the need to invest in very young children is so important, so as to maximize their future well-being. Our children now help each other grow. The big brother affect is now working.

TIPS FOR NURTURING CREATIVITY THROUGH ART

Allow children spontaneous art explorations they can do on their own. Crafts with directions to follow and planned projects are fine in moderation, but open-ended art should be at least 80 percent of the program. Having a collage area in your classroom is a great way to encourage children's creativity. Save odds and ends in plastic tubs or shoeboxes. Provide tape, glue, stapler, stickers, and cardboard or heavy paper. Watch as children assemble and design their own collages with the materials on hand. Change the buttons to beads and see the collage take on new creativity. Change the paper to cardboard, and it's an all-new experience.
