by using proven genetics from G5 Wagyu.  
Put our experience in Cattle Breeding and  
the Meat Industry to work for you!*

*"Get Your Wagyu On!"*

## welcome to G5 Cattle

Hello and a warm welcome to Sulphur Springs, Texas, and our first Wagyu Production Sale.

Being an engineer, I enjoyed a 42-year career designing, building, and constructing projects. Every project had its own unique challenges, but it was gratifying to overcome those challenges and achieve successful completion. With my second career as a rancher, my passion for building a quality seedstock and beef program is as strong as anything I have ever done.

Planning for retirement, in 2012, I started with a small herd of fifteen bred Angus heifers. I grew up around my grandfather's Angus cattle, and Angus was all I knew. After calving them out, and by chance, I Al'd my cows to a Wagyu bull named Itoshigefuji TF 147. I kept the heifers and fed out one of the steers. With my first F1 in the freezer, I fell in love with the Wagyu breed. I had enjoyed Angus all my life, but this was special.

Data is crucial for continuous improvement, whether you are an engineer, a rancher, or in any other profession. I have taken pictures of every carcass harvested over the past four years and have used the MIJ Carcass camera for the past year and a half. Our carcass quality continues to trend upward as we learn about the breed and improve our feed and ranch operations. Our average marble score has increased from 5-6 in 2019 to over 7, with some carcasses attaining 10+.

As America and the world learn about this special breed of cattle, the future of the breed is very promising, and it is in its infancy here in America.

Our breeding program is based on research data, reviewing, and analyzing our own carcass data, and most recently utilizing the Australian Wagyu Association Estimated Breeding Values.

Relatively new to the breed, I have learned that this Wagyu journey I am on is one long, perpetual project that keeps me striving to improve. Our learning curve is steep.

We hope to see you in Sulphur Springs, Texas.

Get your Wagyu on!!!

# "Living the dream"

As a young boy, Marvin Garrett spent long, happy hours on his grandfather's rice farm in South Louisiana. When it was time for the rice harvest, the whole family pitched in. The joy of working alongside his grandfather, father, uncles, brothers, and cousins is something that tugged at him throughout his 42-year engineering career. The farm also ran some Angus cattle, and Marvin took a special interest in the animal husbandry aspect. Those memories became a dream of Marvin's, that he would one day be able to return to his country roots and build a successful family agricultural business.

In 2007, Marvin started purchasing land in northeast Texas. By 2012, he had acquired his first cattle—15 pregnant Angus heifers, and G Five Cattle Co. was born. Once they calved, Marvin did not have a bull to breed them back and began researching artificial insemination and the availability of bulls. Through research and word of mouth, Marvin learned about the superb taste and health benefits of Japanese Wagyu cattle and decided to AI his heifers to a Wagyu bull, Itoshigefuji (TF 147). The first Wagyu/Angus F1 steer that was harvested was “the best beef I had ever had,” claims Marvin, and that led to a larger scale F1 operation.

The herd has now grown to 550 cows between the fullblood seedstock cattle and the females used in F1 beef production. G Five Cattle Co. is now the family business Marvin dreamed of.

Marvin thoroughly enjoys working alongside his bride of 45 years, Becky, and his two daughters, Dana Sloan and Tracy VanSickle, who run the beef merchandising side of the operation.

The Garrett Family is committed to excellence, from top-quality animal production to an intense focus on continued improvements to provide the best tasting and highest quality Wagyu and American Wagyu beef possible. G Five is a company built on a foundation of culture and family values as well as transparency and integrity. G Five puts extreme importance in the care, treatment and condition of the herd. As such, the cattle are never given growth hormones nor non-therapeutic antibiotics. The end consumer should be confident that their beef is natural and healthy.

The first animals harvested were all sold as “freezer beef” to friends and neighbors. That gradually grew to marketing individual cuts and selling beef over the internet. On November 8, 2021, G Five officially opened their retail store on I-30 in Sulphur Springs. The G Five team has also created some new business relationships with a local restaurant as well as a country club. While they are excited to see where these new endeavors lead them, they also take pleasure in shipping to families. Marvin stressed how much they love sharing their exceptional product with families who appreciate good beef. They enjoy the interaction with their customers and hearing their stories.

G5 Wagyu continues to improve their seedstock herd as well as the quality of their beef product. This improvement is accomplished using many tools, including the new Carcass Grading Camera from Meat Imaging Japan. All animals harvested are graded with this camera, and the images are immediately sent and stored at the MIJ online storage. Marvin also focuses on a formula of using donor cows that have been proven both inside and out of the G Five herd and using young herd sires that they have developed and proven through their various herds.

G Five is committed to providing their customers with the best quality products. Whether it be a steak from the new Meat Market or a fullblood bull or female to add to any seedstock operation, you can expect the best!

Please join us at the sale or the retail beef center to be a part of the dream!

# G5 WAGYU

## First Production Sale

**SATURDAY, SEPTEMBER 3**

1:00 p.m. CDT, Sulphur Springs, Texas

Hopkins County Regional Civic Center

1200 Houston St., Sulphur Springs, TX 75482

*(80 miles northeast of Dallas)*

### LIVESTOCK MORTALITY INSURANCE

Livestock Mortality and Theft Insurance is available  
through Robert Schacher, Agent 1859190. Please let  
the clerks at the sale know if you are interested in  
insurance at time of settlement.

### ANNOUNCEMENTS

All announcements from the auction block will take  
precedence over printed material.

### LIABILITY

All persons attending the sale and related functions do  
so at their own risk, legal or otherwise, for their safety  
or the behavior of the animals. The owners and hosts  
assume no liability for loss or damages however so  
caused.

### TERMS

The terms of the sale are cash or bankable check  
unless arrangements are made prior to the sale.  
Satisfactory settlement must be made with the clerk of  
the sale immediately after the close of the sale. Only  
when the above conditions are met will the buyer be  
able to load cattle. In no case will animals be released  
unless settlement is made with the clerk of the sale.

# SCHEDULE OF EVENTS

## MONDAY, AUGUST 15

8:00 p.m.

G5 Wagyu will be featured on the American Rancher. Watch it on RFD-TV, DirecTV Channel 345, Dish Network Channel 231, or live stream at [www.rfdtv.com](http://www.rfdtv.com). The program can be viewed on American Rancher's YouTube page after August 15th.

## FRIDAY, SEPTEMBER 2

Sale cattle available for viewing all day at the Hopkins County Civic Center Indoor Arena (air conditioned.)

## SATURDAY, SEPTEMBER 3

8:00 a.m. – Sale cattle on display

12:00 noon – G5 Wagyu lunch

1:00 p.m. – G5 Wagyu First Production Sale

*Time to Get Your Wagyu On!*

### RESPONSIBILITY

G5 Cattle Co. will represent and be responsible for their animals. In no case, however, will G5 Cattle Co. be responsible for any damages beyond the selling price of the animals. The sale manager assumes no responsibility, no warranties and no guarantees on the cattle presented in this sale. All transactions are between the buyer and seller.

### ERRORS

The material in this catalog has been carefully edited. If errors or omissions are discovered, they will be announced. Such announcements shall take precedence over the printed matter in this catalog and/or other advertising. Neither the editors of the catalog, the sale management, nor the seller can assume any responsibility for errors or omissions in the catalog.

### ABSENTEE BIDDING

Bid online and watch the sale live over the internet at  Live Auctions.TV, powered by Superior Livestock.

### SALE CATALOG AND ADVERTISING

Prepared by Schacher Auction Services, 817.219.0102  
Produced by Southwest TypeStyles, 405.317.1743 

*The sale cattle are available for viewing at G5 Cattle Co. at your convenience, located at 3445 I-30 W, Sulphur Springs, TX 75482*

*They will be ready for viewing at the Hopkins County Civic Center in Sulphur Springs all day Friday and Saturday until sale time...*

1:00 p.m. CDT

# Sale Manager's Comments

Dear Friends and Wagyu Breeders,

Over the last year, it has been a privilege to work with Marvin Garrett and his family at G5 Wagyu. They truly run a family farm, from conception and calving all the way to the consumer's plate. The family designation extends to ranch hands Dalton and Cole, whom I encourage each of you to get to know.

Marvin has developed a plan over his short time in the cattle business and has stuck to that plan, making only minor adjustments when needed. The formula is a good one to follow. Use proven donor cows and develop herd sires using data from both his fullblood seedstock herd and the G5 F1 herd that produces the beef he sells direct to consumers. As you study this catalog, you will find that sticking to that plan has produced very consistent animals that will grow, gain, grade and still maintain excellent maternal qualities. If the footnotes on each lot start to sound repetitive, it is because we are presenting to you a complete and consistent offering.

The recent introduction of EBVs to the G5 herd is the beginning to even more predictability, but more time will be needed to truly discover the genetic potential of these animals as Breedplan, the program used currently by the Australian Wagyu Association to generate EBVs, had to rely on pedigree estimates to calculate G5's numbers. We fully expect these numbers to increase in accuracy as G5 Wagyu reports data to Breedplan. G5 Wagyu measures the quality of each animal they process, using a Carcass Grading Camera from Meat Imaging Japan, LLC, and those carcasses have been outstanding. The American Wagyu Association is currently in the process of developing their own dataset, and it has been reported that sometime this fall they will have carcass EPDs. I encourage every Wagyu breeder to submit all the data possible to the American Wagyu Association so that we can have a highly accurate prediction model here in the United States.

Be sure to watch American Rancher on RFD-TV Monday, August 15, 2022, at 8:00 p.m. CDT to learn more about G5 Wagyu. The program will be available following August 15th on the American Ranchers YouTube channel.

I look forward to seeing each of you at the sale. If you are unable to attend, you can bid and watch the sale at LiveAuctions.tv.

If you have any questions, do not hesitate to contact me or any member of G5 Wagyu.

Sincerely,  
Rob Schacher

# WAGYU BREEDPLAN

## *Understanding the EBVs and Selection Indices*

**EBVs** An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as + or - differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed.

The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait. Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, Wagyu BREEDPLAN EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of *functional* animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility, etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcass merit and docility. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

**Gestation Length EBV (days)** is an estimate of the time from conception to the birth of the calf and is based on artificial insemination and hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

**Birth Weight EBV (kg)** is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

**200-Day Growth EBV (kg)** is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

**400-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

**Mature Cow Weight EBV (kg)** is based on the cow weight when the calf is weighed for weaning, adjusted to five years of age. This EBV is an estimate of the genetic difference in cow weight at five years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

**Milk EBV (kg)** is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

**Scrotal Size EBV (cm)** is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

**Carcass Weight EBV (kg)** is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 990 days.

**Eye Muscle Area EBV (sq cm)** is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 420kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 420kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

**Rump Fat EBV (mm)** is calculated from measurements of subcutaneous fat depth at the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and is adjusted to a standard 420kg carcass. This EBV is an indicator of the genetic differences in fat distribution on a standard 420kg carcass. Sires with low, or negative, fat EBV are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

**Retail Beef Yield EBV (%)** indicates genetic differences between animals for retail yield percentage in a standard 420kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

**Marble Score EBV (Aus-Meat Marble Score)** is an estimate of the genetic difference in the Aus-Meat Marble Score in a 420kg carcass. Larger, more positive values are favourable.

**Marble Fineness EBV (Camera Marbling Fineness Index)** is an estimate of the genetic difference in the Marbling Fineness Index as measured by the Japanese Digital Image Camera. Sires with higher EBVs are expected to produce progeny with higher Marbling Fineness Index.

**Selection Indices** Index values are reported as EBVs, in units of relative earning capacity (\$) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. A selection index combines the EBVs with economic information (costs and returns) for specific market and production systems to rank animals based on relative profit values. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system. More information is available on selecting animals using a selection index. The Index values are derived using BreedObject technology. More information is available from the BreedObject web site. Wagyu selection indices are calculated for three standard market specifications and are designed to optimise profit outcomes from commercial self-replacing, fullblood terminal and F1 terminal production systems. More information is available on Wagyu Selection Indices.

**Self-replacing Index (\$)** - The Self-replacing Index (SRI) Index can be used to select fullblood bulls that will produce females with moderate genetic merit for growth and above breed average slaughter progeny for marbling (targeting marble score higher than 8). The SRI is suited to commercial producers who provide supplementary feeding on grass-based production systems to produce steer progeny of average feedlot entry weight and moderate growth daughters. Heifers are retained for breeding and therefore maternal traits are of importance. Steers are assumed to be slaughtered at 32 months after 550 days of feedlot finishing targeting 435kg carcasses with above average Marble Score - higher than 8.

**Fullblood Terminal Index (\$)** - The Fullblood Terminal Index (FTI) has increased weighting on the Marble Score EBV and can be used to select bulls for the production of profitable slaughter animals where no progeny are retained for breeding. The FTI is suited to commercial producers of fullblood cattle who provide supplementary feeding to a grass-based production system before feedlot entry. The FTI targets to produce steer and heifer progeny of average feedlot entry weight and Marble Score significantly higher than 8.

**F1 Terminal Index (\$)** - The F1 Terminal Index (F1 Index) has predominant weighting on the Marble Score EBV and can be used to select bulls for the production of profitable slaughter animals from crossbreeding where no progeny are retained for breeding. The F1 Index is suited to commercial producers of crossbred slaughter cattle using fullblood bulls and non-Wagyu females. The F1 Index targets average carcass weight for steer progeny of 420kg and 387kg for heifers with above average F1 Marble Score (higher than 6) based on high marbling genetic merit of the sire.

**Wagyu Breeder Index (\$)** - The Wagyu Breeder Index (WBI) can be used to select fullblood bulls that will produce females with high genetic merit for growth and breed average slaughter progeny for marbling. The WBI is suited to commercial producers who rely on low-input, grass-based production systems to produce steer progeny for high feedlot entry weight and high growth daughters. Heifers are retained for breeding, and therefore maternal traits are of importance. Steers are assumed to be slaughtered at 32 months after 550 days of feedlot finishing targeting 460kg carcasses with breed average Marble Score.

It should surprise no one that an L0010 daughter is Lot 1 in this sale. Serious Wagyu breeders are aware of the numbers that L0010 has generated as one of the most popular Wagyu bulls in the world; in fact, H35 projects to be in the top 5% of Breedplan for Fullblood Terminal Index and Milk, top 10% for Self Replacing Index, Wagyu Breeder Index and F1 Terminal Index, and the top 15% for Marble Score and Fineness. In addition to her elite data set, H35 is an impressive female phenotypically. She is a maternal, broody appearing individual with a huge middle and a deep flank. She has a big top with a powerful, square hip and muscle that goes deep in her quarter. She is stout from her top all the way to the ground, standing on solid bone framework and an outstanding structure. H35 is a high percent Tajima, Itozakura and includes Shimane. This combination predictably produces cattle with high quality meat and marbling as well as a moderate frame and excellent structural correctness. Do not miss this opportunity to add a female with real potential as a cornerstone donor for any Wagyu program.

Her dam sells as Lot 2.

When Marvin and I first were picking out cattle for this sale, I told him that G35 was one of the best young Wagyu females that I have seen. I had to work hard to get Marvin to sell her, as she is certainly a female that would be one of his top replacements. From end to end, she is very feminine and maternal in her appearance, she is smooth shouldered with perfect angles through her front end, she lays this front end smoothly into a big ribcage that is bold sprung, and she has a nice, uniform body depth. Take a look at an ideal udder on a three-year-old that will be a true matron to a great cow family. Her genetics are a true example of what G5 is working on, combining herd sires that G5 is proving with proven donors, including the dam of G35 that is heavily influenced by Takeda Farms genetics from Don Brown's Triangle B Ranch, Stigler, OK.

Maternal sister sells as Lot 4 and dam sells as Lot 5.

H51 is a maternal sister to Lot 3 and is sired by the featured G5 Sanjiro son whose semen sells as Lot 74. Again, this is the epitome of the G5 program. The genetics here include a great blend of Takeda Farms bloodlines with the well-rounded performance of Sanjiro. This female will produce calves with some of the best carcasses you will find.

Maternal sister sells as Lot 3 and dam sells as Lot 5.

The dam of Lots 3 and 4, TBR Shigeko 1-2 2120Y is a powerful Itomichi 1/2 donor from Triangle B Ranch. Her dam is the TBR 9036 donor that is currently working in the Cold Water Creek Land and Cattle herd. 2120Y combines many of the best sires in the breed, including Michifuku, Shigeshigetani, and Takazakura. She is a larger framed cow that is very sturdily constructed. She is deep from forerib to flank and is smooth through her front one-third. Put this proven donor to work in your herd.

*Proven donor*

Watch the G5 Wagyu feature  
on RFD-TV's American Rancher...  
8 p.m. CDT, Monday, August 15th!

The program will also be available to view on  
American Rancher's YouTube page after August 15th.

 PE 2/1/22 TO 8/1/22 TO JWW OKUCHIEF 336F.

H41 stacks many of the breed's most balanced sires, including TF Itomichi 1/2, Takazakura, JVP Fukutsuru-068, Itoshigenami TF148 and Michifuku, for size, carcass quality and maternal traits. All of these genetics definitely express themselves in H41. She is a very eye appealing, well balanced young female that is long bodied, deep ribbed and powerfully constructed. Yet with all this power from the shoulder back, she is very refined and smooth fronted. H41 is the G5 kind!

- SELLS SAFE IN CALF TO JWW OKUCHIEF 336F, DUE 11/8/22.

5182C has been one of G5's top producers since she was added to the herd. Both the top and bottom sides of her pedigree are bred for high end meat and marbling quality, with the sire being an Itoshigenami son out of a Michifuku daughter, and the dam is 068 over Sanjirou. Lot 7 is moderate framed and very efficient with extra length and a sound structure. A daughter sells as Lot 7.

## Embryo package

- SELLING THREE CONVENTIONAL EMBRYOS.

These embryos feature the Lone Mountain donor 3464A, one of G5's largest framed mature cows that is double bred Michifuku for top meat quality. The embryos are sired by a Michiyoshi son. The Michiyoshis are bred for sound, functional cattle that will produce excellent beef. These embryos are maternal sibs to Lot 10.

Lots 10 and 11 are daughters of GFC Sanjirou F1, a Sanjirou son out of the dam of Lot 1. F1 is one of the new feature herd sires for G5. As you study his progeny throughout this sale offering, you will understand why we have great confidence in him.

G20 is a direct daughter of Hirashigetayasu J2351, bred for growth and performance and balanced for marbling. G20's maternal grand sire, Bar R Shigesigetani 30T, sets the standard for performance in the US database, being number one for marbling for several years in the US Sire Summary. G20 expresses many traits of Hirashigetayasu (Kedaka Prefecture) with her added size and growth. G20 has a big, deep rib shape with plenty of volume and capacity. She has a perfect angle to her shoulder and hocks and is very free and easy on the move.

28D is a very well-constructed daughter of Itomoritaka and out of a 12P x Haruki 2 donor from Gypsum Valley Wagyu in Kansas. 28D is a high percentage of Kedaka/Tot-tori, and she expresses those traits with her larger frame size, excellent fertility and milk. She also blends 25% Tajima for added carcass quality. She is a big, powerful female that has a flawless structure with a perfect angle to her shoulder and the correct set to her hock. She is big ribbed with a huge rump structure yet pleasing to the eye in her front one-third. She sells with a heifer calf by Okuchief, and another daughter sells as Lot 20.

A full sib to Lot 19A, 27J is the ideal model for the G5 breeding formula, using a proven dam and breeding to bulls being proven in the beef business. In this case, the sire is JWW Okuchief 336F. Okuchief is one of the top up-and-coming G5 herd sires, and his dam is the featured donor Rebecca. Okuchief is an AA for SCD and a 10 for Tenderness; his semen sells as Lots 71 and 72. 27J fits the mold phenotypically as well...big rib, big hip and plenty of muscle in the top.

Here is an opportunity that you will rarely get from G5 Wagyu. Cow families are very important to the G5 breeding program, and G13 is from Marvin's favorite cow, Rebecca. G13 has an appearance much like her mother with extra length of body and a smooth overall design. If you like cattle with size, G13 is up your alley. She has Hirashigetayasu on both the top and bottom of the pedigree as well as LMR Toshiro 1/3, a Trait Leader for 400-day weight, milk and carcass weight, TF Itomichi 1/2 and Sanjirou, providing a very balanced pedigree for growth and maternal traits. Maternal sib embryos sell as Lot 23.

*"Get Your Wagyu On!"*

Lots 35, 36, and 37 are daughters of the G5 Sanjiro herd sire that is proving himself very well in the G5 beef program. These young females will be an asset to any seedstock operation that is focused on producing bulls that will go into an F1 program. Their progeny will be easy calving and will have large, well marbled ribeyes. These females were sorted right from the top of the G5 replacement females.

GFC Sanjiro F1 progeny ribeye

In this pedigree, you will find two donors that are very significant to the G5 program and the Wagyu breed. On the top side is Rebecca, the cornerstone matron at G5, and on the bottom is TBR Tomiko 4 7041T, who has 29 progeny registered with the American Wagyu Association. Lot 38 is a well-built female with outstanding bone work from the ground up. She is strong topped with a nice, level hip and a uniform body depth.

• SELLS OPEN.

Empress 61D is sired by JC Rueshaw 92, a full brother to Rueshaw 75 who recently sold for \$250,000. The dam's side of the pedigree is HB Red Emperor out of a Michifuku/Kikuyasu-400. She is three-quarters red genetics with the added marbling ability of Michifuku and Kikuyasu-400. Her June bull calf by Okuchief sells as side. Okuchief semen sells as Lots 71 and 72.

G4 is another great example of what Chisholm Cattle Co. can do with their utilization of the best of red and black genetics. She is very maternal with heavy milk flow that you can see with the June heifer calf at her side.

*We have taken pictures of every carcass harvested over the past four years and have used the MIJ Carcass camera for the past year and a half. Our carcass quality continues to trend upward as we learn about the breed and improve our feed and ranch operations. Our average marble score has increased from 5-6 in 2019 to over 7, with some carcasses attaining 10+.*

## Proven herd sire

- SELLING FULL INTEREST AND FULL POSSESSION.

The bull division begins with our proven performance herd sire that we acquired from M6 Ranch. 5173C is sired by the U.S. standard for performance, Bar R Shigeshigetani 30T. His dam was bred by Lone Mountain Ranch, Golden, NM, and features breed leaders Takazakura, Michifuku, Sanjirou and TF Itomichi 1/2.

5173C has proven himself through our beef program and in our purebred herd. He is only available for purchase because we are retaining several daughters in both our Fullblood and F1 herds. 5173C is a massive bull with substantial bone, foot size and muscle. He moves with a long, smooth stride and is very structurally correct. 5173C will produce calves that will work in any program to produce bulls, replacement females and beef.

G2064 is a big bodied, powerful bull with rippling muscle in his quarter. He has a good set to his hock with good foot size and bone. This great pedigree has Toshiro 1/3, Bar R 12P, TF 151 and 101L. He flexes well off both ends and covers his tracks on the move.

G Five Cattle and Meats is a family-owned-and-operated "farm to table" ranch in Sulphur Springs, Tx. We are a no hormone, grass fed and grain finished ranch and are committed to excellence. The G Five Family strives to produce superior, delicious and healthy Texas Wagyu and 100% Wagyu beef. Visit us online at [gfivecattle.com](http://gfivecattle.com), or drop by and see us at the G Five Meat Market on the south side of I-30.

E82 is a direct son of the original import bull Judo, and he stacks Judo on the bottom of his pedigree along with Big Al and Hikari. Take a look at the extra muscle over his top and how well he carries that through his lower one-third. He has good length of body and a great structure. E82 will be a fantastic herd bull addition for an Akaushi herd.

Kodachi is another top herd bull for an Akaushi herd. He is sired by SOR Kunisaki and out of a Kalanga Red Star daughter from Idaho Wagyu Genetics. Kodachi is a massive bull with a huge middle and super muscle throughout his body. If you need to add pounds and rib eye to your herd, look no further.

*Lots 69 and 70 are top herd bulls for Akaushi herds.*

JWW Okuchief 336F "Chief" is out of our best donor, Webbco Hira Rebecca 133C, and is sired by WSI Okukanemichi. Chief is the up-and-coming herd sire for G5. We will keep many daughters for our Fullblood herd, and he will be used extensively in our F1 program. He is a complete made bull with a solid appearance. Plenty of rib, muscle and design. We are very proud of the Chief.

## CC MICHIFUKU 7052E AI

- SELLING 1 PACKAGE OF 5 UNITS OF SEMEN AS LOT 73.

7052E has proven himself in both our seedstock herd and our F1 herd. He consistently produces high quality, high Prime carcasses. His daughters fit the mold of the G5 program, such as H21, who sells as Lot 25, with her extra deep body and the way she carries that depth through her flank.

- SELLING 2 PACKAGES OF 5 UNITS OF SEMEN AS LOTS 75 AND 76.

JC 158 is very important to G5 Ranch. As you can see, his carcasses are consistent and high quality. His daughters, like G35, who sells as Lot 3, have perfect udders and sound design. Unfortunately, JC 158 has moved on to the next plane, but we have a substantial bank of semen and will continue to use him extensively in both our fullblood and F1 herds.

This daughter of JC Shigefuku 158 sells as Lot 3.

JC Shigefuku 158 progeny ribeye.
