Dear Lab Tech,

My patient is being sent to you to have a testing for glucose & insulin, 3 specimens. The "3 specimens" refers to:

1. Fasting blood draw (followed by a **75 g Glucola drink**)
2. Next blood draw is one hour later (60 min after Glucola)
3. Last blood draw is 2 hours later (120 min after Glucola)

**LAB CORP:**

Per extensive dialogue and investigations with Lab Corp Managers, the proper codes for LabCorp patients are:

- **090343**, Glucose Tolerance (3 sp blood). \*This will not require any injection nor oral medication. **\*Note, this is an unpublished test.**
- **146993**, Insulin (3 specimen). \*This should be drawn in a separate tube at each time interval.

**QUEST LAB:**

The proper codes for Quest Lab patients are:

- **13475**, glucose tolerance test, 3 specimen, 75 grams
- **6995**, Insulin response to glucose, 3 specimen

Please feel free to contact me if you have any questions.

Sincerely Yours,

*sharon Best, PA-C, MHS*
