An Offer You Can't Refuse?

In 30 days, we will change the Compliance, Patient Engagement & Revenue (CPR) fortunes of your organization and you will do absolutely nothing different.

Rather than ask for a 30-minute call to explain something you could read about in two minutes, the only thing I will ask you to change is how you learn about what we do. <u>We own the very technology built to grade and penalize providers to the CMS Standard of Care and we are turning it around to help you beat the system</u>. We can tell you to the dollar what CMS and other payers say you failed to do where medical necessity was found. Then we go get it for you and you do nothing.

No money upfront, no new technology to learn nor new staff responsibilities. We run it all for you in the background away from your workflow to assure superb compliance. Expect \$120 in compliance and medically necessary driven revenue per patient for a cost of \$20 after you are paid by insurance.

FACT 1

Like the tax code, CMS/Payers reward you for services you think you are doing but we can prove with their data that you are not. Only Precision owns the technology that keeps you in the loop in real time, engages the patient in a billable encounter, and then turns that into revenue for you.

FACT 2

In the value-based world, a provider can gain far more compliance and revenue by taking care of the entire patient population electronically and remotely than they ever will be able to within the office. The incentives are there; you just aren't accessing or maximizing them!

FACT 3

Our <u>Precision Stealth Workflow Intelligence</u>, like the software in the background of the air traffic controller of a busy airport, guides this compliance path and engages the patients electronically along the way. Our platform then automatically directs them to take the next needed steps based on your direction and protocols.
