

Carbon-based Products

What is Graphene?

Graphene (Not Graphene Oxide or GO) is a single atom layered honeycomb structure of carbon that has amazing properties. It is highly conductive so it helps maintain the voltage across the cells to aid in healing. It also acts as a lattice to support the cells to minimize scarring. Additionally it relieves itching fast! It is currently being used to treat burn patients along with stem cells to re-grow skin!

We use it to soothe:
Dryness, Pain, Itching, and Burning!

While Reducing Scarring!

A Graphene Suspension Soak is great for itch and neuropathy symptom relief!

Before & After:

A stubborn 7 day old wound, healed weeks faster after 4 days of using Carbon Creme!

Dry cracked feet are noticeably better after just 4 nights with Carbon Creme!

Blistering, painful, and itchy Eczema cleared up with 4 weeks of Carbon Creme nightly use!

Plus instant itch Relief!
