# Carbon-based Products

## What is Graphene?

Graphene (Not Graphene Oxide or GO) is a single atom layered honeycomb structure of carbon that has amazing properties. It is highly conductive so it helps maintain the voltage across the cells to aid in healing. It also acts as a lattice to support the cells to minimize scarring. It is currently being used to treat burn patients along with stem cells to re-grow skin!

## We use it to soothe:

**Dryness, Pain, Itching, and Burning!**

**While Reducing Scarring!**

2nd Degree Burn

Graphene

2 Days Old

Application

2 Days After

8 Days After
