COMPRESSION  
GARMENTS

A woman with voluminous curly hair is shown in profile, walking towards the left. She is wearing a black, form-fitting, sleeveless compression suit. The background is a light, textured grey. Thin, white, swirling lines are drawn around the woman's body, emphasizing the contours of the suit. The overall aesthetic is clean and modern.

# WHO IS EUROPACK?

While chasing our dreams, we create value and provide benefits. We make our work a part of our daily routine, we produce while we live, we live while we produce. We care about team awareness, sharing and cooperation, and we continue to learn every day with the excitement of the first day in order to walk confidently into the future. By combining the enormous power of knowledge with dreams, goals and experience, we adopt moderation as a principle and strive to be good for the soul of man. That's why our motto "Catch The Time" is the perfect sentence that expresses **EUROPACK** in two words, in the shortest and clearest way.

as **EUROPACK**, we know well that individuals with a healthy spirit will not suffer from any physical handicap. We design the values and products we produce by focusing primarily on serving human values and then on providing comfort by fulfilling the technical requirements.

We work with innovative principles that can add value to the society we live in, the environment and all living things with whom we share the environment, protect and protect their rights, and include us and the next generations.

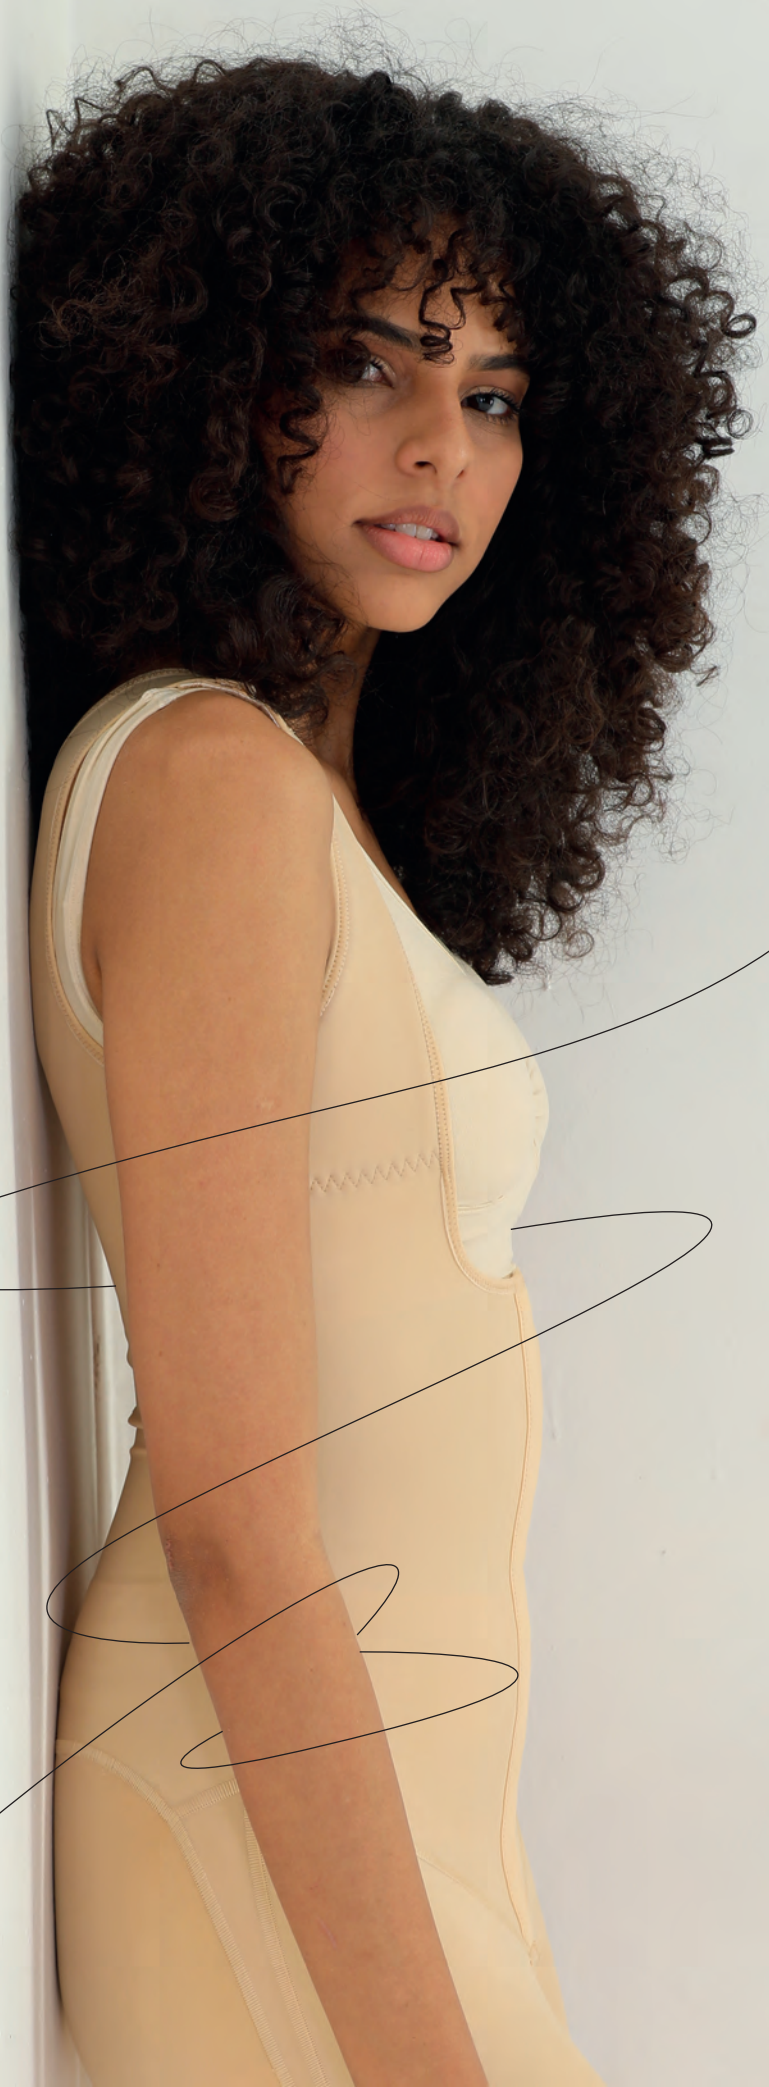

We are **EUROPACK**, we set out to support you, add comfort to your life, grow and develop together, fully adhere to ethical principles and rules, and create value for the environment, all living things and humanity.

We look forward to establishing business partnerships with all our partners who share the same excitement as us on this journey, to be inspired by your ideas and to benefit from your experience.

# WHY OUR? GARMENTS.

DROR

You are always our priority. We aim to support you after the surgery, and to make the healing-process easier. Therefore we produce our products with the high technology, we use active silver which prevents the growth of odor-causing bacteria in the fabric and improves moisture management. After your surgery, our garments prevent the growth of bacteria thanks to active silver technology and provide faster healing and long-term usage by preventing odor.

Our garments accelerates the healing process, prevents odor, provides freshness and feeling of refreshment. And with the Lycra, the fabric that can stretch transversely and longitudinally, our garments provide posture comfort. We are using flat knitting technology since it is more vibrant, and has a long ser...

# DETAILS MAKE US DIFFERENT!

*Quality is hidden in the details. With its distinctive details, Europack Compression Garments offer a comfortable, hygienic and user-friendly experience during healing-process.*

# HOW TO MEASURE?

*Accurate measurement is crucial for our products to be more effective. You can view the tips in below for accurate measurement*

## ■ NECK

Place the measuring tape around the neck at the height where the collar would normally rest – just below your Adam's apple. Do not crane your neck out or squeeze your chin down. The tape should be resting lightly on the skin, not squeezing it.

## ■ CHEST

Wrap the measure under your armpits at the widest part of your chest. The tape measure should be snug around your chest and shoulder blades, but not so tight that it compresses your chest. The number in inches is your chest size.

## ■ UNDER BUST

Pull the measuring tape around your ribcage, just underneath your breasts. Make sure the tape is running straight and level around your body. This is your underbust measurement.

## ● ARM

Relax your arm. Pull the measuring tape around the place where your arm is the biggest...

## ■ WAIST

Place a tape measure around your middle at a point halfway between them (just above the belly button). Make sure it's pulled tight, but isn't digging into your skin. Breathe out naturally and take your measurement.

## ■ ABDOMEN

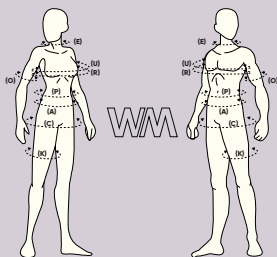

To measure waist circumference, locate the upper hip bone and the top of the right iliac crest. Place a measuring tape in a horizontal plane around the abdomen at the level of the iliac crest. Before reading the tape measure, ensure that the tape is snug, but does not compress the skin, and is parallel to the floor.

## ■ HIPS

Pull the measuring tape around the widest part of your hips. Generally, this will bring the tape measure right across your hip crease (where your leg creases when you lift your leg.) Make sure that the tape is running straight and level around your body. This is your hip measurement.

## ■ THIGH

Wrap the tape around the thickest part of your thigh. Stand with your legs straight. Find the thickest part of your thigh. This is your upper thigh, right under the buttocks. Start the tape at the front of your thigh and wrap it around towards the back before bringing it back to the front. Mark the number at the point where the tape measure meets itself.

# Post-Surgical Compression Corset for BBL Fat Transfer

Compression garment used after hip fat transfer (BBL) operations and accelerates blood circulation with its compression effect. The garment is produced by double-layered elastic fabric for operation areas. The compression garment provides more rigid and body-form-appropriate compression with extra reinforced fabric support in the operation area. The thin and flexible fabric in the hip area provides homogeneous pressure after the operation and supports recovery.

# Adjustable Abdominal Binder with 3 Panels (with Pad)

Garment is used in liposuction and abdominoplasty, take place in abdomen, crotch, back. Bandage, produced from supportive, flexible fabric, decreases the risk of trauma in the operation area. Through abdominal part being padded and flexible, it applies compression against dropsy which occurs after surgery, by adding equal pressure to every part. Speeds up the healing process of dropsy by increasing the blood circulation. Fabric structure, helps to decrease the complains about pain, sensibility, dropsy in the operation area.

# MANUFACTURING THE NATURE LOVE

While we were producing our products, our priority was to contribute to the world we live in the name of formation and protection of ecological balance. During production, we supported our products technically but we did not chose to harm the nature but to be a part of its flow. We used recyclable materail because we want to leave a mark on this world with our name not with our carbon-foot print.

Polyamide, which we use in our products, is completely recyclable. In addition, we designed our products, which are in direct contact with the operation area, with latex-free materials. In this period when latex allergies are intense, we ensure that people who meet with our products after the operation spend this period more comfortably, not more difficult than it already is.

Our products, whose raw materials are natural, provide long-term use, and when they become nusable, they return to nature. During our production, we complete the process with the least resource consumption and preparing our orders. We work without sacrificing our product quality but being aware that we owe to nature.

Since our goals are always oriented towards the future, we believe that it is unfair to think only about the period we live in. Therefore, by using sustainable environmentally friendly materials, we are trying to leave a world that is right of the future generations.

# PACKING ART

## CARDBOARD BOXES

Our boxes, which we have carefully placed our products in it, are supported by durable materials. They are perfect for our products with its stylish design.
