MEDIA RELEASE

Duality Q™ Launches as a Subsidiary of Platinum Business Services LLC, Advancing Quantum-Inspired and Advanced Computing Solutions

Duality Q™ today announced its official launch as a subsidiary of Platinum Business Services LLC, delivering advanced computing and quantum-inspired solutions designed to help government and enterprise organizations solve highly complex, data-intensive challenges.

Duality Q™ is a Small Disadvantaged Business (SDB) and leader in quantum computing, designs futuristic, disruptive quantum systems that translate cutting-edge research into operational advantage for today's enterprises. Grounded in advanced quantum architectures, our technology delivers next-generation performance for the real-time processing of vast datasets, enabling faster, safer, and more efficient decision-making. We specialize in engineering scalable, high-efficiency solutions that integrate seamlessly with existing high-performance computing, artificial intelligence, cybersecurity, and advanced sensing environments. By bridging the classical and quantum domains and cultivating a skilled quantum workforce, Duality Q™ accelerates the adoption of quantum-ready architecture and unlocks transformational capabilities across mission-critical applications. We incorporate quantum-secure communication principles, including quantum-safe encryption, to safeguard data against threats and emerging Quantum Key Distribution (QKD) techniques, to help organizations prepare for a post-quantum threat landscape.

“Duality Q™ was established to explore and operationalize advanced computing capabilities that go beyond traditional approaches,” said President and CEO Jody Venkatesan of Duality Q™. “As a subsidiary of Platinum Business Services, we are uniquely positioned to pair cutting-edge innovation with trusted federal expertise and real-world mission execution.”

Backed by Platinum Business Services' proven experience in cybersecurity, cloud, DevSecOps, and enterprise IT, Duality Q™ operates with a focused mandate to accelerate innovation while maintaining the rigor, security, and compliance required by government and critical infrastructure customers.
