1. Remove factory radiator.

2. Remove fan and clean radiator if needed.

**3. Assemble frame with mesh on work bench. Use
provided 1/4" button head bolts and nylon lock nuts.**

4. Cut plastic tabs on side of fan shroud to fit inside kit.

**5. Install factory rubber grommets into cut holes at
bottom of radiator kit.**

**6. Install provided spacer and black 3inch bolts to
secure radiator in kit. Use provided nut and washer.**

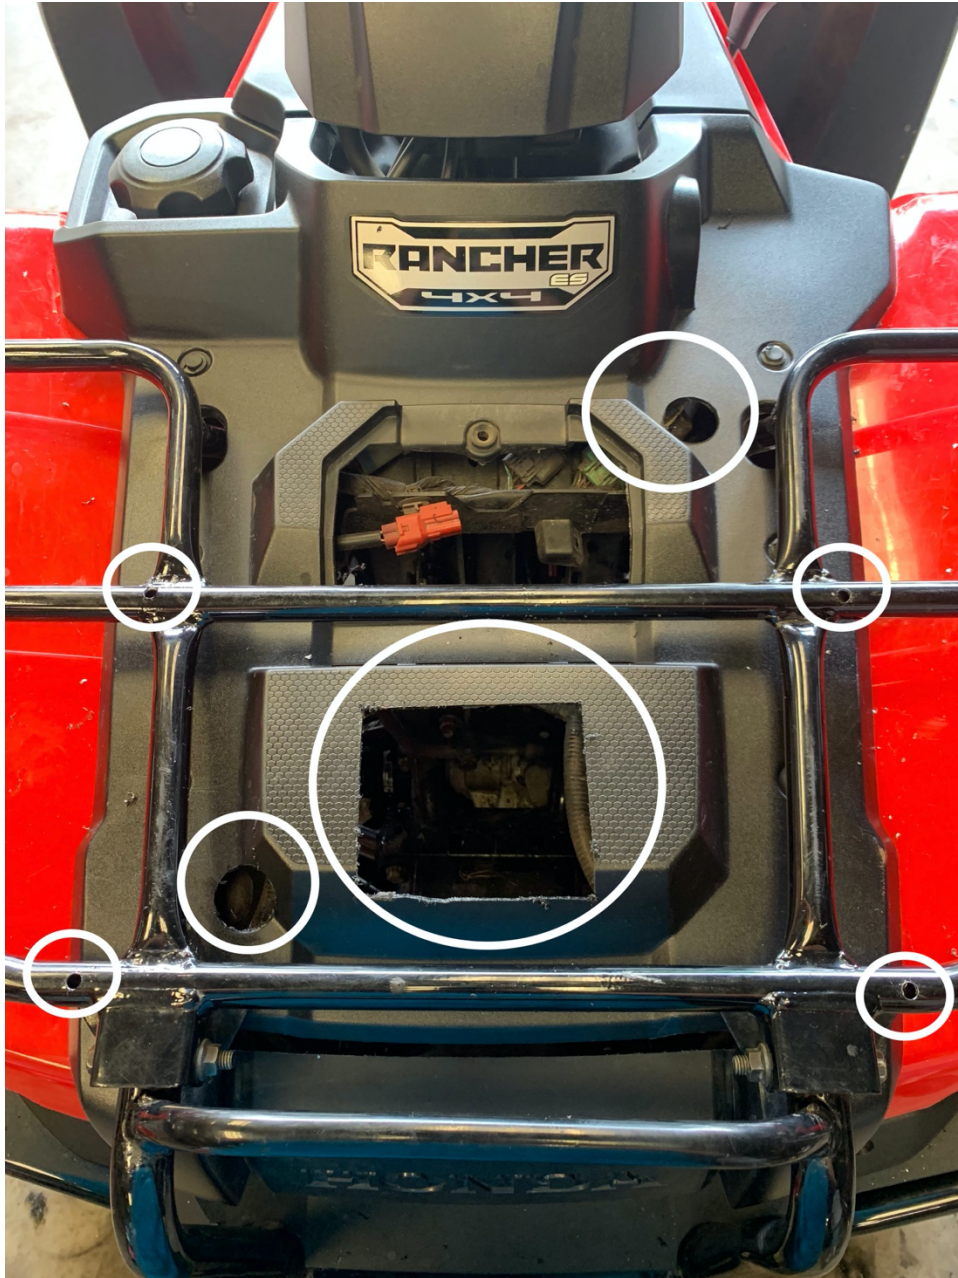

7. Cut 4x4in hole in plastic for clearance.

8. Lay radiator and fan assembly on rack to check for fitment. Trim more if necessary for fan shroud clearance.

9. At this time, center and align radiator kit with rack. Mark where your bottom radiator hose hole needs to be drilled and where rack needs to be drilled for mounting.

10. Drill holes in plastic and metal rack. Drill hole in plastic door as shown for fan motor wires. You do not

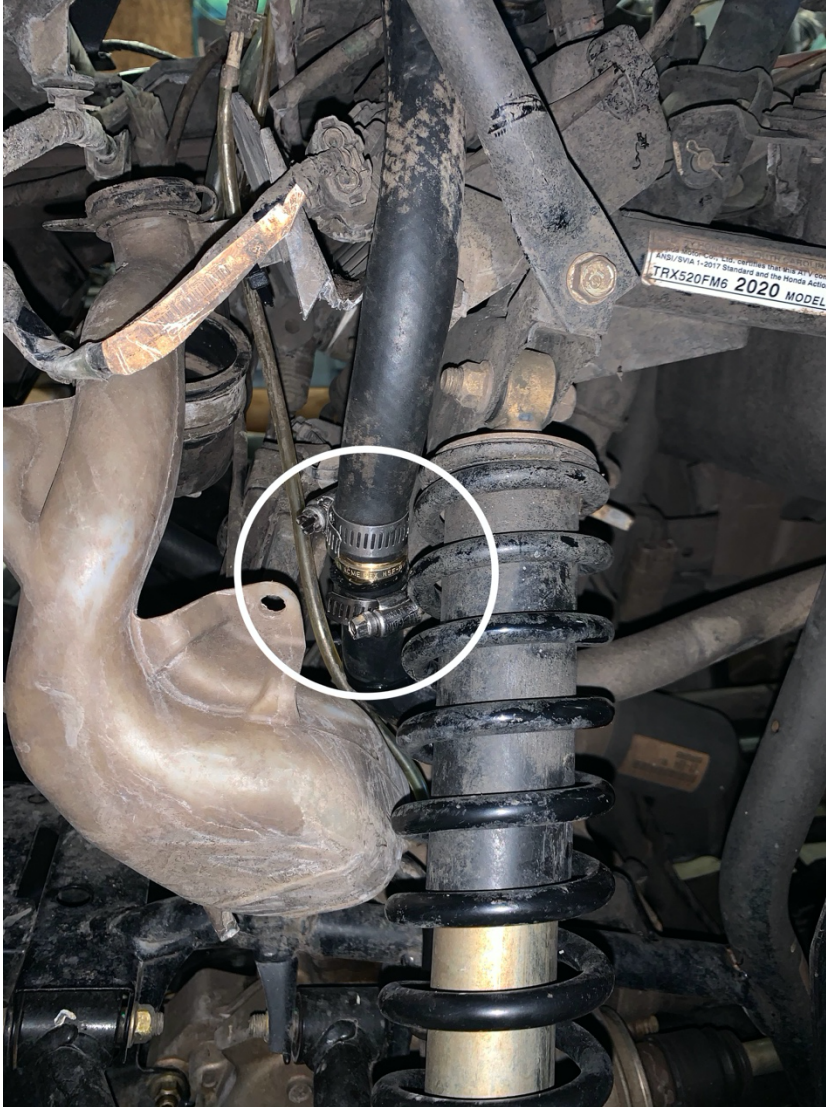

have to cut and re-splice.

11. Install radiator kit with provided mounting hardware.

12. Cut factory hose and use hose splicers in position shown.

- 13. Use provided vent line to replace overflow tube.**
- 14. Use provided zip ties to secure overflow bottle to frame.**
- 15. Fill radiator with coolant.**

- 16. Let idle until fan cycles 3 times.**
- 17. Turn off and allow engine to cool.**
- 18. Top off radiator.**
