Travel Test & Vaccination Card

The Travel Test & Vaccination Card is specifically designed to replace the International Certificate of Vaccination or Prophylaxis, often referred to as the yellow card. The design takes into account all the requirements as specified by ICAO 9303 for a Machine Readable Travel Document MRTD. The life of the card is 10 years and can store up to 30 Vaccinations and 20 tests. Larger cards with different designs are available for children's pediatric vaccination records as well.

The card can be read with any Vaxtrac activated passport scanner that supports NFC and MRZ scanning. It is designed to be a companion to the MyVax mobile app for ease of updates from the user. Provides accurate record keeping with credentials for vaccinations that are:

a) Readable and available across international borders
b) Bound to the dispensing agent
c) Bound to the vaccination or test
d) Accurately date stamped

Benefits:

- This card and accompanying system can remove the 40% fraud in yellow cards today
- The card will help protect our borders from current and future pandemics
- This system will rebuild trust in travel and can help the airline/travel industry.
- Complete data integrity through the Certus electronic signature/blockchain process.

Meets:

- ICAO 9303 ID1
- ISO7812, 7816 and ISO14443-A
- CRC16 and CRC32 engines are compliant with ISO/IEC 3309
- Conforms to (HDLC) procedures ISO/IEC 13239:2002
- FIPS 197, 140-3, 180-4, and 186-4
- Global Unique Card Identifier system (GUID) is compliant with ASN.1 Object Identifier components (ITU-T Rec. X.667 | ISO/IEC 9834-8, and with IETF RFC 4122)
