

# DataOps for Medical Imaging AI

We Automate Medical Data Pre-Processing

*De-Identification*

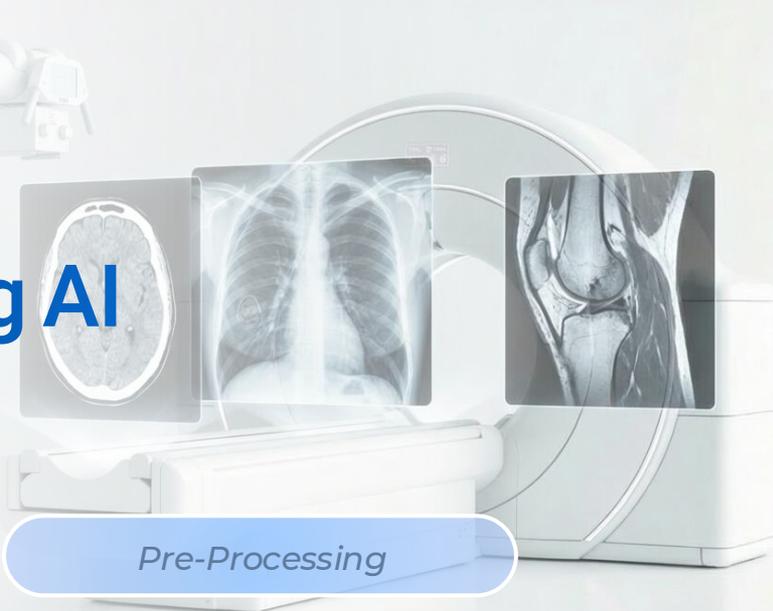

*Quality Control*

*Pre-Processing*

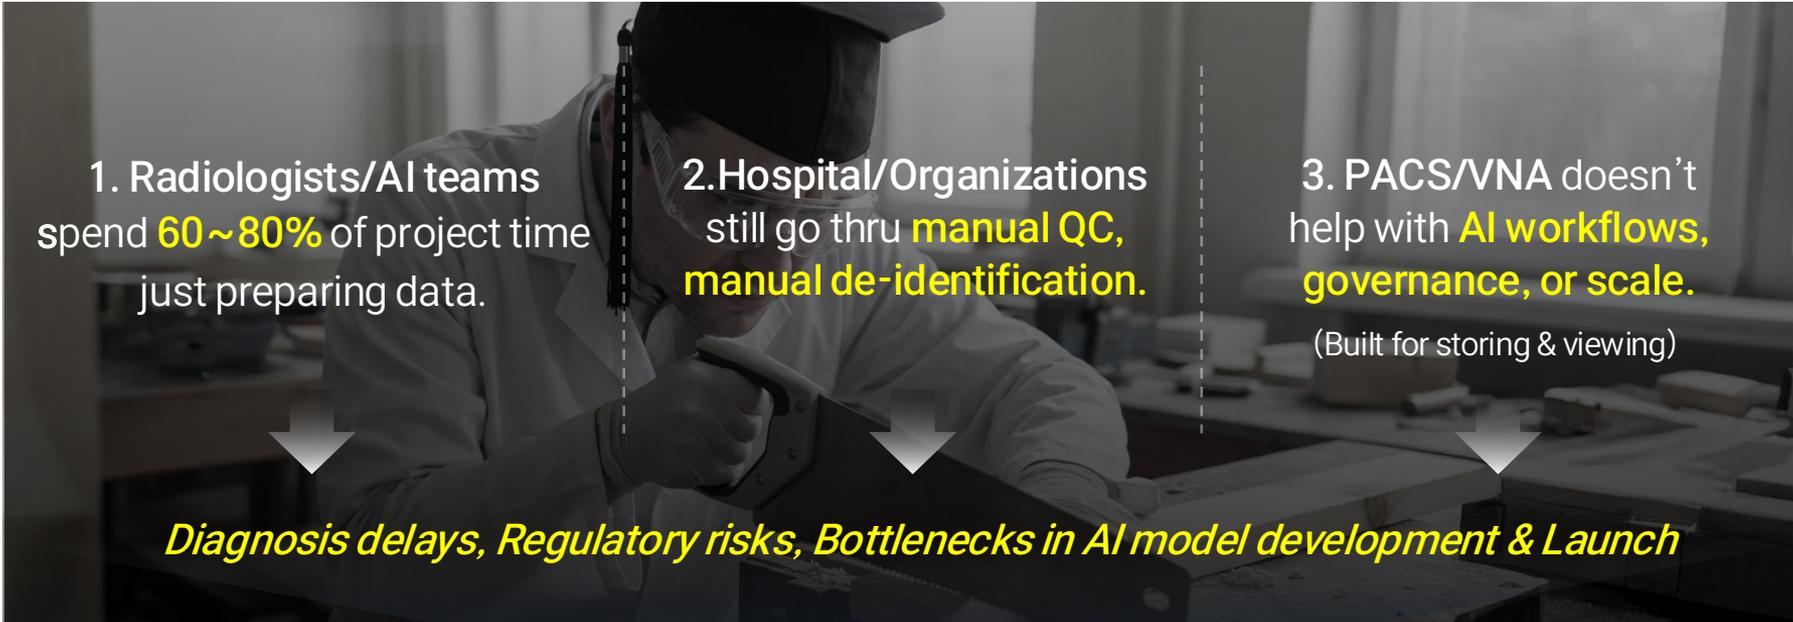

*Export Automation*

*Retry/Edit*

*Standardization*

## Why Your Ph.D Engineers Are Still Manual Data Janitors

1. Radiologists/AI teams spend **60~80%** of project time just preparing data.

2. Hospital/Organizations still go thru **manual QC, manual de-identification.**

3. PACS/VNA doesn't help with **AI workflows, governance, or scale.**

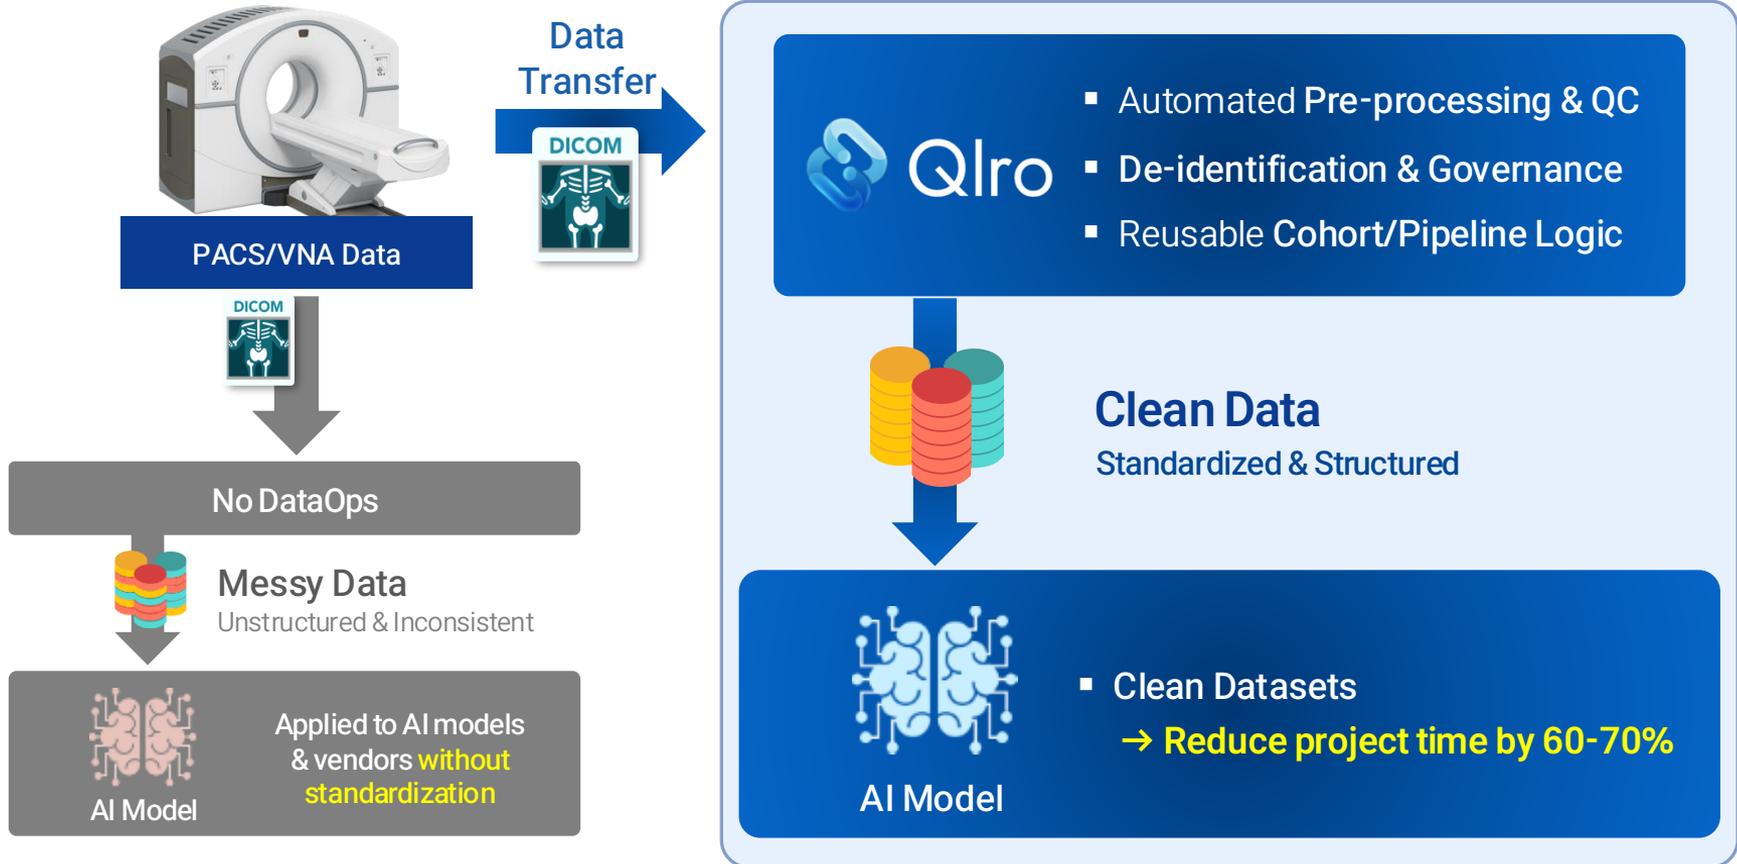

(Built for storing & viewing)

*Diagnosis delays, Regulatory risks, Bottlenecks in AI model development & Launch*

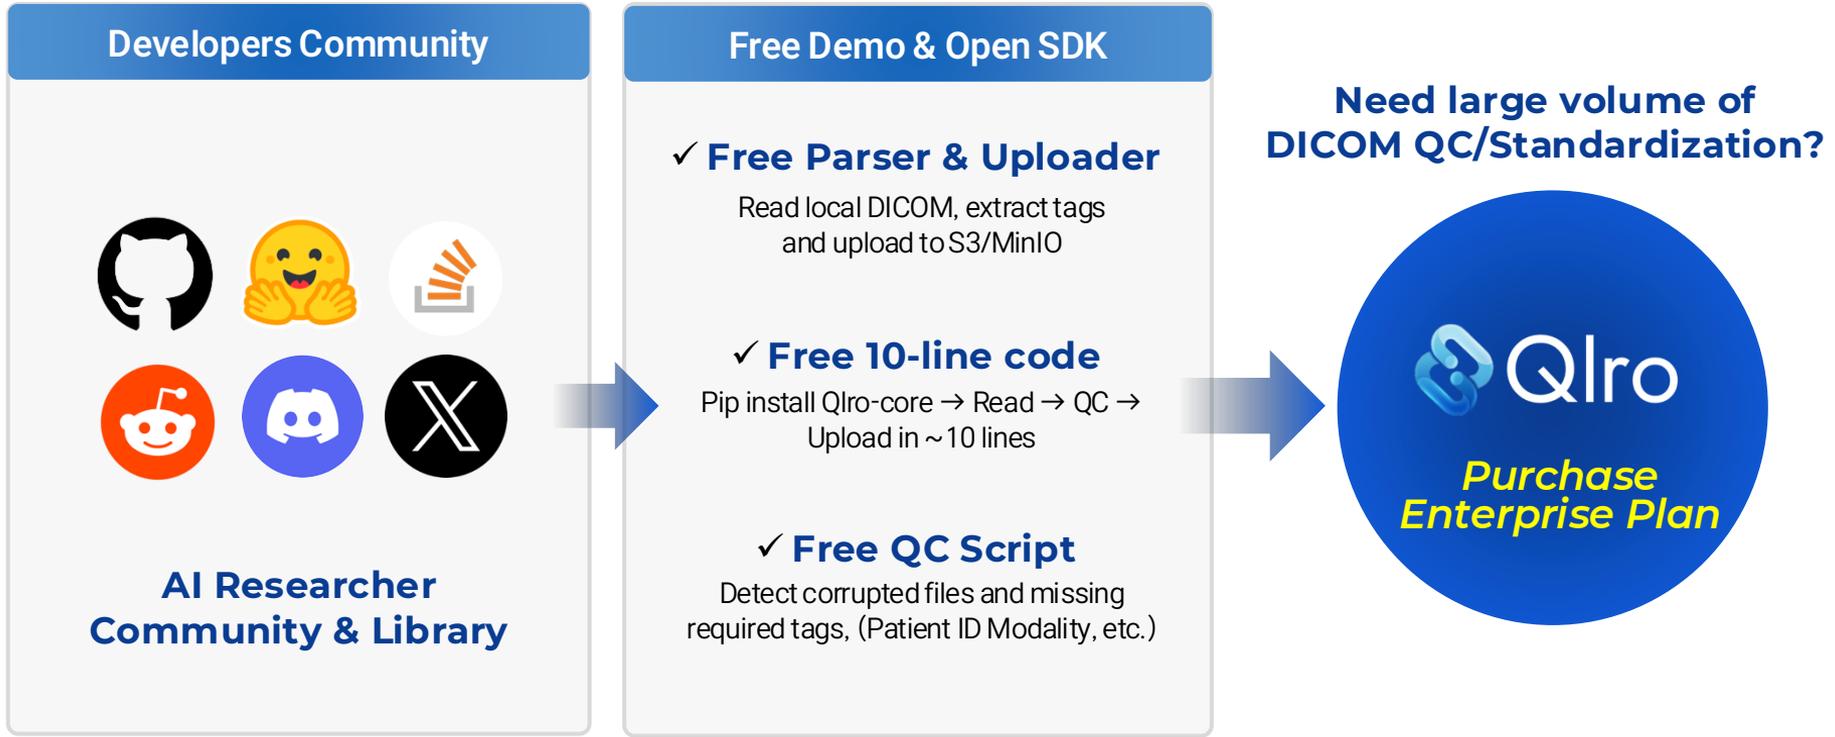

All of these symptoms come from one root cause:

**There is no DataOps for medical imaging.**

# Qlro Turns Raw DICOM Chaos into Clean, AI-Ready Datasets Automatically

## Land with Open-Source, Expand with Enterprise-Grade Ops

Open-source covers scripts and basic QC → **Customized Plan for Higher Volume**

# From 5 Years of Visual AI Expertise to 'Medical Imaging AI'

## Unstructured Data Analysis

Advanced image/video interpretation (CLIP, ASL integration).

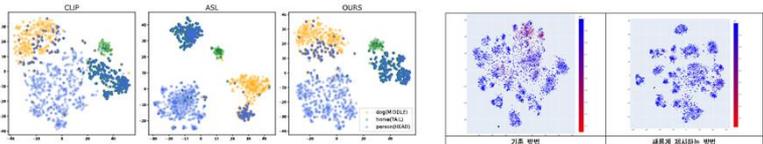

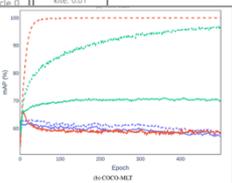

Figure 5: Visualized embedding space for 'dog', 'horse', and 'person' on VOC-MLT. Each point is one image sample. In the case of multi-label images, we divided the point in half to express the corresponding class. Our method integrates the advantages of CLIP and ASL, demonstrating effective clustering of multi-label samples and extensive separation between negative samples as seen in CLIP, with closely classified positive samples characteristic of ASL.

## SCIE Publication - AI-driven analysis

- Solved Long-tail data problems using "TailCLIP"

head / middle / tail	True Labels	CLIP only	ASL only	TailCLIP
	car bicycle truck traffic light	bicycle 98.43 motorcycle 1.09 car 0.22 car 0.13 truck 0.02	car 0.83 bicycle 0.17 person 0 motorcycle 0	bicycle 90.39 car 7.80 truck 1.03 parking meter 0.18 traffic light 0.17
	person bicycle skateboard	skateboard 85.03 person 10.95 snowboard 0.88 skis 0.72 airplane 0.27	person 99.85 bicycle 0.13 truck 0 motorcycle 0	skateboard 95.46 person 4.33 snowboard 0.19 surfboard 0.03 kite 0.01
	dining table knife cake cup	cake 98.18 book 0.78 dining table 0.35 sandwich 0.10 laptop 0.09	knife cake dining table scissors	
	backpack handbag person airplane	airplane 50.40 person 40.76 car 1.33 remote 0.93 suitcase 0.86	person airplane handbag laptop frisbee	

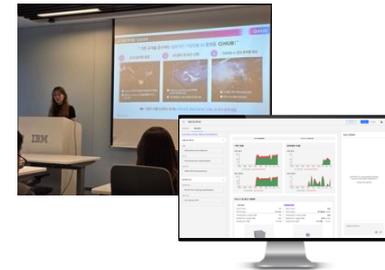

Figure 11: Example prediction results from COCO-MLT dataset. Prediction probabilities across 80 classes were generated using a soft

## 'Medical Imaging AI' Traction

### IBM Quantum

- o 25/04/23 Signed Global Partnership Program.
- o 25/08/25 Developing Governance Model with watsonx.
- o 25/12/09 Qlro v1.0 Development & Demo completion.

### Centro Bio Inc.

센트로바이오(주)

- o 25/07/31 QuPath-based pathology test integration

### ORIENTOM

Quantum Software & Consulting

- o 25/10/09 Discussion on testbed for unstructured clinical data.
- o 25/11/19 MOU for Quantum Hybrid Framework development.
- o 25/11/20 Discussion on QPU-QsLM Hybrid Modeling & Empirical Studies (Medical, Finance, Manufacturing)
