- Container Loading and Discharge Inspection
- Quality & Quantity Inspections
- Sampling & Analysis
- Raw Material Inspection
- Production Process Inspections
- Stock Inspections
- Damage Inspections
- Visual Inspection
- Final Product Inspection
- Pre-Shipment Inspection

Loading & Discharge Inspection (Ship's)

Whatever the transportation vessel or management may be, we offer our ship loading and discharge inspection service and inspection report you need by providing suitable transportation conditions, prioritizing quality and safety requirements and following inspection procedures in order to prevent possible problems which may occur during loading and discharge.

Inspections Carried Out ;

- Visual inspection of products during loading and discharge operations
- Analysis of loading documents
- Protection methods against natural factors
- Inspection of the service's conformance with contract
- Cleanliness control of the Tanks/Holds of Vessel
- Witnessing of weight control at the customs weighbridge

Container Loading and Discharge Inspection

We offer our container loading and discharge inspection with our professional team which prioritizes safety whatever the container service may be; inspects how containers are loaded before and after shipment, and which has the capacity to prevent cost errors in handling of products from packaging and loading to discharge processes.

Inspections Carried Out ;

- Recording of container number
- Cleanliness control of the container
- Quantity verification
- Tally of the goods
- Temperature control
- Packaging & Marking, labeling control
- Taking photos of the loading operations

Sampling & Analysis

As Focus, we take place in all stages of sampling operations and provide support in performance of analysis operations.

We prioritize the accuracy and reliability of inspection and supervision in ports and terminals, approved sampling and commercial analysis results, and carry out examination with our professional team together with risk analyses within the scope of inspection activities.

Inspections Carried Out ;

- Container and ship services
- Visual Inspection
- Stockyard inventory management
- Equipment supervision services
- Traditional and mechanic sampling

Quality & Quantity Inspections

While performing quality and quantity inspections constantly and at certain intervals, we supervision whether the physical, chemical and mechanical characteristics of product comply with international standards and sales contract, inspect the quality and reliability of product, product integrity, and safety handbook, and carry out risk assessment with our professional team accordingly.

Inspections Carried Out ;

- Supervising the compliance of product quality with the determined specifications, standards and legislation
- Determination of conformity of packaging, labeling and loading with specifications upon documentation of the shipment of amount foreseen in agreement
- Preventing shipment of and returning goods which are not in conformance with contract in case they do not have the desired quality
- Prevention of unnecessary expenses by parties and time loss
- The opportunity to obtain certificate of quality conformity from a neutral institution for goods sold, hence increasing the chance to market the product
- Opportunity to find new markets for product by utilizing the efficiency of inspection companies in domestic and foreign markets

Raw Material Inspection

Through raw material inspection service, we give an identity to your product, increase its reliability and search whether it has the desired quality with analysis tests; hence we detect the quality of raw material before it causes a major problem both in terms of finance and reputation of business, and help creating strategies which will bring more profit. We perform most accurate and objective inspections for you with state of the art measuring devices together with our professional team.

Inspections Carried Out ;

- Creating product identity
- Safety
- Conformity
- Early detection of risks
- Preparing test programs
- Validation, supervision and certification services

Production Inspections

As Focus, we offer production inspections; evaluation, supervision and technical support services by keeping the entire product quality and production activities under inspection during production stage to ensure that institutions give more correct decisions, and more trouble-free production activities are carried out.

Inspections Carried Out ;

- Visual inspections during production stage of product
- Quality controls required during production stage in line with customer demand
- Specific conformity inspections according to customer specifications

Stock Inspections

With Focus stock inspections, we both perform constant supervision and offer point inspection services at regular intervals in order to minimize your trade risks and supervision whether the conditions of your contract are fulfilled.

We control processes of stocks under safe conditions with our team.

Inspections Carried Out ;

- Point inspection services
- Process control
- Regular traceability
- Detecting system damages, losses and other problems within the shortest time possible

Damage Inspections

As Focus, we are available to carry out the required examination and report the results in case of any damage. Our professional team serves as witness in inspection of the products in question even in the absence of your company's representative, and focuses on fair assessment of your product in place.

Inspections Carried Out ;

- Quantity
- Quality
- Packaging
- Labeling
- Function
- Specification

Visual Inspection

As Focus, we perform visual inspection in full during loading and discharge which includes the inspection of proper loading and placement of products, and whether the freight loaded is actually the one you sold or bought, and thus we make sure together with our professional team that product safety is ensured during transportation.

Inspections Carried Out ;

- Inspection of whether the carrier is suitable for transporting the load in question
- Reporting of markings, packaging type and merchandise inventory
- Verification that the required master's receipt is given
- Verification of features or quality parameters of product which cannot be visually inspected
- Inspection of packaging, markings, labels, production dates, expiry dates and supplier certificates
- Certification of how and when goods were loaded, and their place within carrier

Final Product Inspection

As Focus, we make sure throughout the entire production process from product design to shipment that your products comply with standards determined by customers and regulators in the market through final product inspections and various analyses to protect quality standard and ensure safety at top level.

Inspections Carried Out ;

- Quality (appearance, performance and workmanship)
- Quantity
- Packaging
- Labeling
- Shipment markings
- Handling
- Endurance tests
